FINANCIAL STABILITY

New Council and Research Office Should Strengthen the Accountability and Transparency of Their Decisions

G A O

Accountability * Integrity * Reliability

Why GAO Did This Study

In 2010, the Dodd-Frank Wall Street Reform and Consumer Protection Act created FSOC to identify and address threats to the stability of the U.S. financial system and OFR to support FSOC and Congress by providing financial research and data. GAO was asked to examine (1) any challenges FSOC and OFR face in fulfilling their missions (2) FSOC and OFR's efforts to establish management structures and mechanisms to carry out their missions, (3) FSOC and OFR's activities for supporting collaboration among their members and external stakeholders, and (4) the processes FSOC used to issue rules and reports.

GAO reviewed FSOC documents related to the annual reports, rulemakings, and committee procedures, as well as documents on OFR's budget, staffing, and strategic planning. GAO also interviewed FSOC and OFR staff, FSOC member and member agency staff, and external stakeholders, including foreign officials, industry trade groups, and academics.

What GAO Recommends

GAO makes 10 recommendations to strengthen the accountability and transparency of FSOC and OFR's decisions and activities as well as to enhance collaboration among FSOC members and with external stakeholders. Treasury said, as Chairperson, that the council and OFR would consider the recommendations, but questioned the need for FSOC and OFR to clarify responsibilities for monitoring threats to financial stability and stated that OFR expects to share some risk indicators. However, stronger and more systematic actions are still needed in these areas.

FINANCIAL STABILITY

New Council and Research Office Should Strengthen the Accountability and Transparency of Their Decisions

What GAO Found

These new organizations—the Financial Stability Oversight Council (FSOC) and Office of Financial Research (OFR)—face challenges in achieving their missions. Key FSOC missions—to identify risks and respond to emerging threats to financial stability—are inherently challenging, in part, because risks to financial stability do not develop in precisely the same way in successive crises. Collaboration among FSOC members can also be challenging at times, as almost all of them represent independent agencies that retained existing authorities. OFR faces the challenge of trying to establish and build a world-class research organization while meeting shorter-term goals and responsibilities.

FSOC's and OFR's management mechanisms to carry out their missions could be enhanced to provide greater accountability and transparency. FSOC and OFR have taken steps toward establishing such mechanisms. FSOC has established seven standing committees generally composed of staff of its members and member agencies to support the council in carrying out its business and provide information to the council for decision making and adopted a memorandum of understanding on information sharing to help govern its activities. FSOC and OFR have also issued annual reports on their activities and created web pages that provide some information to the public. However, certain mechanisms could be strengthened. For instance:

- FSOC's Systemic Risk Committee, which is responsible for identifying risks to financial stability, has procedures to facilitate analysis of risks raised by staff. However, without a more systematic approach and comprehensive information, FSOC member agencies, on their own, may not be well positioned to judge which potential threats will benefit from interagency discussions. GAO recommends that FSOC collect and share key financial risk indicators as part of a systematic approach to help identify potential threats to financial stability.
- Public information on FSOC's and OFR's decision making and activities is limited, which makes assessing their progress in carrying out their missions difficult. GAO recommends that (1) FSOC keep detailed records of closed-door sessions and (2) both entities develop a communication strategy to improve communications with the public.
- FSOC's annual reports—which serve as its key accountability documents—do not consistently identify which entities should monitor or implement the identified recommendations or give time frames for specific actions. To hold FSOC accountable for its recommendations, GAO recommends that FSOC recommend a lead agency or agencies to monitor or implement each recommendation within specified time frames.
- OFR issued a strategic framework in March 2012 as an important first step in adopting a strategic planning and performance management system. However, that document lacked some leading practices such as linking activities to strategic goals and performance measurement systems. GAO recommends that OFR further develop a strategic planning and performance management system that includes these elements and will allow it to be held accountable.

FSOC Membership

Source: GAO analysis of Dodd-Frank Act.

Although FSOC and OFR have taken steps to promote collaboration among FSOC members and external stakeholders, FSOC could further adopt key practices. FSOC member agency staff noted that agencies have leveraged their joint expertise and resources to produce FSOC's mandated reports and rules. OFR has also taken steps to collaborate with external stakeholders by initiating a working paper series, moving to form an advisory committee, and coordinating U.S. efforts at the international level to help create a legal entity identifier for financial entities that could enable regulators to identify parties to financial transactions. However, FSOC could do more to promote collaboration. For instance, FSOC, and OFR are required to monitor risks to financial stability, but they have not yet clarified agency responsibilities for implementation—creating the potential for regulatory gaps or duplication of effort. In addition, FSOC could take better advantage of statutory mechanisms to leverage external resources, including developing advisory committees. To improve collaboration and coordination among its member agencies and with external stakeholders, GAO recommends that FSOC (1) develop policies to clarify when formal collaboration or coordination should occur and FSOC's role in such efforts, (2) more fully incorporate key practices for successful collaboration that GAO has previously identified, and (3) clarify roles and responsibilities for implementing requirements to monitor risks to the financial system.

FSOC has issued rules that improve the transparency of its processes, and statutorily mandated reports but has not established processes to help ensure that these will have their intended results. While FSOC has issued rules on

processes for designating nonbank financial entities for additional oversight and intends to review certain aspects of those rules, it has not developed plans for comprehensively evaluating whether designations are having their intended impact—reducing threats to financial stability. The impact of the designations on the economy and the financial entities will depend, in part, on a number of rules being issued by independent FSOC member agencies that will be applied to those being designated. Without a comprehensive assessment of the impact of these rules that will require the cooperation of individual FSOC members, understanding whether the designations are having their intended impact will be difficult. GAO recommends that FSOC develop a comprehensive framework for assessing the impact of its designation decisions. In addition, FSOC has not developed a systematic forward-looking process for identifying potential emerging threats in its mandated annual reporting process. In particular, FSOC does not have processes for consistently identifying such threats, separating them from more current threats, or prioritizing them. Identifying a large number of threats—the 2011 report identified over 30—without prioritizing them makes focusing on those that are most important difficult for decisionmakers. The 2012 report also included many threats, and neither report separates current threats from those that are potentially emerging. To improve FSOC's annual reporting on potential emerging threats, GAO recommends that FSOC develop more systematic approaches that are forward looking and help to prioritize the threats.

United States Government Accountability Office
Washington, DC 20548

September 11, 2012

The Honorable Spencer Bachus
Chairman
Committee on Financial Services
House of Representatives

The Honorable Randy Neugebauer
Chairman
Subcommittee on Oversight and Investigations
Committee on Financial Services
House of Representatives

The 2007-2009 financial crisis focused attention on weaknesses in the U.S. regulatory structure, including the lack of an agency or mechanism responsible for monitoring and addressing risks across the financial system and a shortage of timely information to facilitate that oversight. In response to the crisis, Congress passed the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) in July 2010, which provided for a broad range of regulatory reforms.¹ Among many other things, the act established the Financial Stability Oversight Council (FSOC) to monitor the stability of the U.S. financial system and take actions to mitigate risks that might destabilize the system.² The Dodd-Frank Act also created the Office of Financial Research (OFR) to support FSOC and Congress by providing financial research and data.³ Congress gave FSOC a number of significant authorities to help it execute its broad mission, including to designate nonbank financial companies for heightened supervision by the Board of Governors of the Federal Reserve System (Federal Reserve) and to require financial companies to provide data to OFR. Congress set up some specific accountability mechanisms for FSOC and OFR, such as requiring annual reports and

¹Pub. L. No. 111-203, 124 Stat. 1376 (2010).

²The provisions of the Dodd-Frank Act dealing with FSOC are contained primarily in subtitle A of title I, §§ 111-123, codified at 12 U.S.C. §§ 5321-5333, and title VIII, codified at 12 U.S.C. §§ 5461-5472. The following sections of this report describe FSOC's specific functions in detail.

³The provisions dealing with OFR are contained primarily in subtitle B of title I, §§ 151-156, codified at 12 U.S.C. §§ 5341-5346.

testimonies. However, some members have emphasized that to hold FSOC and OFR accountable, it needs to have a full understanding of the operations and decision making processes of these entities to help ensure that FSOC and OFR use their authorities as Congress intended.

To help provide oversight of FSOC and OFR, the Dodd-Frank Act gave GAO authority to audit these new entities, including their structures, staffing, and decision making processes. Under this authority, you asked us to examine the standing-up of these new entities. This report examines (1) any challenges FSOC and OFR face in fulfilling their missions; (2) FSOC's and OFR's efforts in establishing management structures and mechanisms to carry out their missions and attain their goals; (3) FSOC's and OFR's activities for supporting collaboration among members and external stakeholders, including international bodies and regulators; and (4) FSOC's processes used to issue rules and reports.

To identify and examine any challenges faced by FSOC and OFR, we reviewed our prior reports on financial reform and the 2007-2009 financial crisis and statements by government officials and academic experts. To assess their progress in establishing management structures and mechanisms, we reviewed documents and interviewed officials on FSOC's and OFR's missions, budgeting, staffing, data security, and planning. We assessed the reliability of OFR's staffing data and determined that the data were sufficiently reliable for the purposes of this report. In addition, we reviewed literature on tools used or proposed by entities that write financial stability reports, and others, to identify potential threats to financial stability. We also coordinated with the inspectors general from the Department of the Treasury (Treasury) and the Council of Inspectors General on Financial Oversight (CIGFO) on their reviews of OFR and FSOC, respectively.⁴

To evaluate FSOC's and OFR's activities for collaboration among members and external stakeholders, we analyzed FSOC policies, procedures, and products to determine whether and how their practices

⁴The Council of Inspectors General on Financial Oversight, which was created by the Dodd-Frank Act, is made up of the inspectors general of eight federal agencies—the Federal Reserve, Commodity Futures Trading Commission (CFTC), Department of Housing and Urban Development, Treasury, Federal Deposit Insurance Corporation (FDIC), Federal Housing Finance Agency, National Credit Union Administration, and Securities and Exchange Commission (SEC)—and the Special Inspector General of the Troubled Asset Relief Program.

compared with key elements of effective collaboration we have previously identified.⁵ We also reviewed selected documents from international bodies for evidence of changes in their dealings with U.S. financial regulators since FSOC's creation. To examine FSOC's processes for issuing rules and reports, we identified products that had been issued as of July 20, 2012, and reviewed the processes used to develop them. We compared documentary and testimonial information from Treasury officials with rulemaking criteria established in our prior work and with standard economic practice. For all objectives, we interviewed FSOC and OFR staff and officials from FSOC's member agencies. We also interviewed external stakeholders, including foreign officials, industry trade groups, and academics on various topics related to our objectives. For more information on our scope and methodology, see appendix I.

We conducted this performance audit from November 2011 to September 2012 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

Background

For some time, we have been reporting that the U.S. financial regulatory system has relied on a fragmented and complex arrangement of federal and state regulators to oversee its institutions.⁶ This system—put into place over the last 150 years—has not kept pace with major developments in financial markets and products in recent decades. In particular, the current system was not designed to oversee today's large and interconnected financial institutions, whose activities pose new risks

⁵GAO, *Results-Oriented Government: Practices That Can Help Enhance and Sustain Collaboration among Federal Agencies*, [GAO-06-15](#) (Washington, D.C.: Oct. 21, 2005).

⁶See for example, GAO, *Financial Regulation: Modernization of the Financial Services Regulatory System*, [GAO/T-GGD-95-121](#) (Washington, D.C.: Mar. 15, 1995); *Long-Term Capital Management: Regulators Need to Focus Greater Attention on Systemic Risk*, [GAO/GGD-00-3](#) (Washington, D.C.: Oct. 29, 1999); *Financial Regulation: Industry Changes Prompt Need to Reconsider U.S. Regulatory Structure*, [GAO-05-61](#) (Washington, D.C.: Oct. 6, 2004); *Financial Regulation: A Framework for Crafting and Assessing Proposals to Modernize the Outdated U.S. Financial Regulatory System*, [GAO-09-216](#) (Washington, D.C.: Jan. 8, 2009); and *High-Risk Series: An Update*, [GAO-09-271](#) (Washington, D.C.: January 2009).

to the institutions themselves as well as to the broader financial system. This risk to the broader financial system, called systemic risk, refers to the possibility that a single event could broadly affect the entire financial system, causing widespread losses rather than just losses at one or a few institutions. Given these observations and concerns, we offered a framework for crafting and evaluating regulatory reform proposals that would have the characteristics that should be reflected in any new regulatory system.⁷ For example, we said that a regulatory system should minimize regulatory burden and promote accountability. We also designated reforming the financial regulatory system as a high-risk area in 2009.⁸

FSOC's three primary purposes under the Dodd-Frank Act are to

1. identify risks to the financial stability of the United States that could arise from the material financial distress or failure, or ongoing activities, of large, interconnected bank holding companies and nonbank financial companies, as well as risks that could arise outside the financial services marketplace;
2. promote market discipline by eliminating expectations on the part of shareholders, creditors, and counterparties of these large companies that the U.S. government will shield them from losses in the event of failure; and
3. respond to emerging threats to the stability of the U.S. financial system.

To achieve these purposes, the Dodd-Frank Act gave FSOC a number of important authorities that allow it to

- collect information across the financial system so that regulators will be better prepared to address emerging threats;
- designate for supervision by the Federal Reserve those nonbank financial companies that pose risks to the financial system as defined by the act;

⁷[GAO-09-216](#). The framework included a total of nine characteristics: clearly defined regulatory goals; appropriately comprehensive; system-wide focus; flexibility and adaptability; efficiency and effectiveness; consistent consumer and investor protections; independence, prominence, authority, and accountability for regulators; consistent financial oversight; and minimal taxpayer exposure.

⁸[GAO-09-271](#).

-
- designate as systemically important certain financial market utilities (FMU) and payment, clearing, or settlement activities, requiring them to meet prescribed risk management standards, and subjecting them to enhanced regulatory oversight;⁹
 - recommend stricter standards for the large, interconnected bank holding companies and nonbank financial companies designated for enhanced supervision;
 - vote on determination by the Federal Reserve that action should be taken to break up institutions that pose a “grave threat” to U.S. financial stability; and
 - facilitate information sharing and coordination among the member agencies to eliminate gaps in the regulatory structure.¹⁰

FSOC is chaired by the Secretary of the Treasury. As the chairperson of FSOC, the Secretary has certain powers and responsibilities related to FSOC’s meetings, rulemakings, recommendations, and reports and testimony to Congress. The Secretary, in consultation with the other FSOC members, is also responsible for regular consultation with the financial regulatory entities and other appropriate organizations of foreign governments or international organizations. As shown in figure 1, the Dodd-Frank Act provides that FSOC consists of 10 voting members and 5 nonvoting members. The 10 voting members provide a federal regulatory perspective and an independent insurance expert’s view. The 5 nonvoting members offer different insights as state-level representatives from bank, securities, and insurance regulators or as the directors of some new offices within Treasury—OFR and the Federal Insurance Office—that were established by the Dodd-Frank Act. The Dodd-Frank Act requires that the council meet at least once a quarter.

⁹Financial market utilities are multilateral organizations such as payment systems, central securities depositories, and central counterparties that provide the essential infrastructure to clear and settle payments and other financial transactions.

¹⁰Treasury, *Financial Research Fund FY 2013 President’s Budget Submission* accessed Feb. 22, 2012, <http://www.treasury.gov/about/budget-performance/Documents/14- FY 2013 FRF CJ.pdf>.

Figure 1: FSOC Membership

Source: GAO analysis of Dodd-Frank Act.

The Dodd-Frank Act established OFR to serve FSOC and its member agencies by improving the quality, transparency, and accessibility of financial data and information, conducting and sponsoring research related to financial stability, and promoting best practices in risk management. The act requires OFR to set up a data center and a research and analysis center to, among other things,

- collect and provide data to FSOC and member agencies;
- standardize the types and formats of data reported and collected;
- perform applied and essential long-term research;
- develop tools for risk measurement and monitoring; and
- make the results of its activities available to financial regulatory agencies.

FSOC and OFR do not receive appropriated funds. During the 2-year period following the enactment of the Dodd-Frank Act, the Federal Reserve provided OFR funds to cover the expenses of the office. Moving forward, OFR will be funded through assessments levied on bank holding

companies with total consolidated assets of \$50 billion or more and nonbank financial companies designated by FSOC for supervision by the Federal Reserve.¹¹ Until FSOC finalizes its designations for nonbank financial companies, assessments will be levied only against large bank holding companies. The collected assessments will be deposited into the Financial Research Fund, which was established within Treasury to fund the expenses of OFR. FSOC's expenses are considered expenses of OFR. The President's fiscal year 2013 budget included estimates of about \$123 million for the Financial Research Fund for fiscal year 2012 and about \$158 million for fiscal year 2013. Most of these funds are to support OFR, but the estimates include about \$8 million for FSOC operations in fiscal year 2012 and nearly \$9 million in fiscal year 2013.¹² Most of OFR's funding is budgeted for contractual services—including reimbursable support from Treasury and administrative services from the Office of the Comptroller of the Currency (OCC) and the Bureau of Public Debt—employees and equipment.¹³

¹¹As will be discussed later in this report, the Dodd-Frank Act provided that FSOC may determine whether a nonbank financial company shall be supervised by the Federal Reserve and subject to prudential standards if it determines that material financial distress at the nonbank financial company, or the nature, scope, size, scale, concentration, interconnectedness, or mix of the activities of the company, could pose a threat to the financial stability of the United States. The act lists specific factors for FSOC to consider in making these determinations along with any other risk-related factors it deems appropriate. Large bank holding companies (with total consolidated assets of \$50 billion or more) are automatically subject to enhanced supervision and prudential standards, according to the act. The Secretary of the Treasury, with the approval of FSOC, establishes regulations for determining the assessments levied on these nonbank financial companies and large bank holding companies. The assessments are to take into account differences among the companies based on the considerations for establishing prudential standards and are to equal OFR's total expenses.

¹²The budget submission also included payments to FDIC for reimbursement of implementation expenses, such as rule writing and resolution planning, for about \$5 million in fiscal year 2012 and about \$11 million in fiscal year 2013.

¹³A substantial portion of OFR's basic services are performed through reimbursable arrangements with Treasury and through other interagency arrangements that fall under the contractual services category. Specifically, this includes reimbursable support from departmental offices within Treasury; benefits from OCC; and services from the Bureau of Public Debt including human resource, procurement, and financial management services.

FSOC and OFR Face Challenges Achieving Their Missions

Key FSOC missions—to identify risks to U.S. financial stability and respond to emerging threats to stability—are inherently challenging. Risks to the stability of the U.S. financial system are difficult to identify because key indicators, such as market prices, often do not reflect these risks. Further, such threats do not develop in precisely the same way in successive crises, making them harder to identify. As FSOC's chairperson acknowledged in FSOC's 2011 Annual Report, the most significant threats to the stability of the financial system will often be the ones that are hardest to diagnose and preempt. Moreover, financial innovations that are not well understood further complicate the challenge. For example, prior to the 2007-2009 financial crisis, some experts viewed the risks associated with falling housing prices as a regional phenomenon. With the advent of mortgage-backed securities, these experts believed that the danger that falling house prices posed on the regional level had been mitigated, as they thought these securities had diversified and dispersed the risks. Although this dispersion of risk was expected to limit the impact of regional downturns, it helped to transmit the downturn in housing prices across the financial system and the nation. Experts have also noted that the task of effectively monitoring and mitigating systemic risk is both vast and procedurally complex. Additionally, actions to preemptively mitigate threats may appear unnecessary or too costly at the time they are proposed or taken. Although achieving FSOC's key missions is inherently challenging, failure to achieve them will continue to leave the financial system vulnerable to large or multiple shocks that could result in the large losses in asset values, higher unemployment, and slower economic growth associated with previous financial crises.

Although the Dodd-Frank Act created FSOC to provide for a more comprehensive view of threats to U.S. financial stability, it left most of the fragmented and complex arrangement of independent Federal and State regulators that existed prior to the Dodd-Frank Act in place and generally preserved their statutory responsibilities. As a result, FSOC's effectiveness hinges to a large extent on collaboration among its many members, almost all of whom come from state and federal agencies with their own specific statutory missions. In testifying on the coordination of Dodd-Frank rulemakings assigned to specific FSOC members, before the U.S. House Financial Services Committee in October 2011, the chairperson of FSOC recognized this challenge. He noted that the coordination challenge in the rulemaking process was hard because the Dodd-Frank Act left in place a financial system with a complicated set of independent agencies with overlapping jurisdictions and different responsibilities. However, the Chairperson also noted that certain

agencies were working much more closely together than they did before the creation of FSOC. In our prior work, the federal financial regulators also emphasized the importance of maintaining their independence while serving as members of FSOC. For example, several FSOC member agencies noted in our prior work on Dodd-Frank rulemakings that any effort to coordinate rulemakings assigned to specific agencies through FSOC would need to be balanced against the statutory requirements of the independent agencies involved.¹⁴ In addition, the Chairperson has similarly noted that he does not have the authority to force agencies to coordinate, and neither he, nor FSOC as a whole, can force agencies to adopt compatible policies and procedures. FSOC members' staffs and staff at member agencies also noted that differences in policies and procedures are designed to address the differences in the entities they regulate. Regulators have also pointed to their differing statutory requirements to explain why they have differing views on policy issues. During the Basel II deliberations, for instance, U.S. bank regulators—the Federal Deposit Insurance Corporation (FDIC), Federal Reserve, and OCC—each had a different view of various aspects of those requirements.¹⁵ The regulators traced their differences back to their specific statutory responsibilities. Furthermore, although the United Kingdom (UK) and the European Union (EU) have established or are in the process of establishing councils to oversee systemic risk, in the UK and the EU the central bank has more members or more votes than other entities on these councils. In contrast, in the United States, the central bank—the Federal Reserve—has one member on FSOC and one vote among the 10 voting members. FSOC policy staff and staff at member agencies noted that the diverse perspectives of FSOC members enrich FSOC deliberations.

OFR also faces the challenge of trying to build a world-class research organization from the ground up while meeting shorter term goals and

¹⁴GAO, *Dodd-Frank Act Regulations: Implementation Could Benefit from Additional Analyses and Coordination*, [GAO-12-151](#) (Washington, D.C.: Nov. 10, 2011).

¹⁵Basel II is a risk-based capital framework for banks based on an international accord. For more information on Basel II adoption in the United States, see GAO, *Risk-Based Capital: Bank Regulators Need to Improve Transparency and Overcome Impediments to Finalizing the Proposed Basel II Framework*, [GAO-07-253](#) (Washington, D.C.: Feb. 15, 2007) and *Risk-Based Capital: New Basel II Rules Reduced Certain Competitive Concerns, but Bank Regulators Should Address Remaining Uncertainties*, [GAO-08-953](#) (Washington, D.C.: Sept. 12, 2008).

responsibilities. Recognizing these difficulties, the Dodd-Frank Act required that OFR submit annual human resource planning reports to Congress that cover the new entity's plans for recruitment and retention, training and workforce development, and workforce flexibility. The September 2011 plan stated that a key feature of the recruitment message was to highlight OFR's ability to engage top academic and industry professionals through several unique opportunities. These included the ability to work in innovative research networks and with unique data sets, as well as the historic opportunity to be involved from the beginning in a new institution with broad, challenging goals. OFR recognizes the challenge of attracting and retaining highly trained staff, who often have other employment alternatives. When asked about challenges they face, OFR officials noted that one challenge to starting a research organization that is an unknown entity derives, in part, from some prospective employees wanting to see which other researchers are in place before agreeing to an employment offer. OFR officials told us that the organization is making steady progress toward reaching a point at which it will have an established core of staff and greater name recognition that will lessen this challenge. Those researchers who supported the creation of OFR have suggested that it will take many years for the new entity to provide the insights that will ultimately be expected of it. These researchers have also noted that the absence of a director for the organization has slowed this process. At the same time that OFR faces the long-term challenges of building a world-class research organization, it also faces the challenge of balancing this longer-term goal with the need to meet shorter-term goals such as providing ongoing support to FSOC and standardizing the types and format of data collected and reported by the financial regulatory agencies.¹⁶

¹⁶OFR's shorter-term activities will be discussed later in this report.

FSOC's and OFR's Management Structures and Mechanisms Could Be Enhanced to Provide Greater Accountability and Transparency

FSOC and OFR have taken steps toward meeting the challenges they face, including setting up their management structures, communicating their mission and goals, and hiring staff. However, both entities could enhance their accountability mechanisms and level of transparency. FSOC and OFR have also taken steps to build mechanisms to identify potential threats to financial stability, but additional actions would strengthen this key mission of both entities. Additionally, while FSOC and OFR have developed web pages on Treasury's website and taken other steps to provide information to the public, these efforts have limitations and do not always fully inform Congress or the public about their activities and progress. Without taking additional steps to improve accountability and transparency, FSOC and OFR are missing the opportunity to demonstrate their progress in carrying out their missions.

FSOC and OFR Have Set Up Initial Structures and Hired Staff, but Some Key Leadership Positions Remain Vacant at OFR

As we have reported in the past, agencies can manage or mitigate many of the challenges of setting up new organizations by developing strong management structures and control mechanisms.¹⁷ The literature on control mechanisms and government performance suggests that certain mechanisms, such as setting out goals and linking staffing, activities, and budgets to them, are key even when new agencies are being formed.¹⁸ Such control mechanisms provide management, staff, stakeholders, and the public with a good understanding of the organization's mission and goals, the steps it intends to take to carry out those goals, and an ongoing level of accountability. Agencies also need to establish measures to

¹⁷GAO, *Millennium Challenge Corporation: Progress Made on Key Challenges in First Year of Operations*, [GAO-05-625T](#) (Washington, D.C.: Apr. 27, 2005) and *Troubled Asset Relief Program: Additional Actions Needed to Better Ensure Integrity, Accountability, and Transparency*, [GAO-09-161](#) (Washington, D.C.: Dec. 2, 2008).

¹⁸See GAO, *Internal Control: Standards for Internal Control in the Federal Government*, [GAO/AIMD-00-21.3.1](#) (Washington, D.C.: November 1999); and *Internal Control Standards: Internal Control Management and Evaluation Tool*, [GAO-01-1008G](#) (Washington, D.C.: August 2001). These standards reflect updates in private sector internal control guidance, including the issuance of *Internal Control—Integrated Framework* by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Also see COSO, *Enterprise Risk Management—Integrated Framework* (September 2004). For the importance of objectives and performance measures in determining accountability and efficiency, see, for example, GAO, *Results-Oriented Government: GPRA Has Established a Solid Foundation for Achieving Greater Results*, [GAO-04-38](#) (Washington, D.C.: Mar. 10, 2004) and *Government Performance: GPRA Modernization Act Provides Opportunities to Help Address Fiscal, Performance, and Management Challenges*, [GAO-11-466T](#) (Washington, D.C.: Mar. 16, 2011).

gauge their performance so that they can change strategies that are deficient in a timely manner. Organizations must also maintain an appropriate level of transparency. Because certain agencies rely on confidential information, such as that obtained during regulatory supervision, an appropriate level of transparency recognizes the need to maintain confidentiality and information security. In addition, agencies must balance the need for transparency with the need for those involved in deliberations to be able to express their views.

FSOC has begun setting up its management structures. It has established a dedicated policy office within Treasury's Office of Domestic Finance, led by a Deputy Assistant Secretary, which functions as the FSOC Secretariat. Among other duties, the policy office works with staff of other FSOC members to support FSOC in its day-to-day operations by helping to draft rules, studies, and reports and prepare and circulate relevant materials to agency members prior to council meetings. The office also serves as a mechanism to bring issues to the council quickly. As of June 2012, there were 25 staff members in the FSOC policy office.

FSOC has established seven standing committees generally composed of staff of its members and member agencies to carry out the business of the council including developing the information the members need to make decisions effectively. The Deputies Committee, which meets every 2 weeks and consists of senior officials designated by members, is responsible for coordinating and overseeing the work of the staff committees. The deputies may resolve issues that arise in the other committees and determine the information that needs to be passed on to the FSOC members for discussion. Some other committees include the Systemic Risk Committee that analyzes emerging threats to financial stability, designations committees that support FSOC in evaluating FMUs and nonbank financial companies for certain additional oversight, and the Data Committee that supports OFR's data collection efforts.¹⁹ FSOC policy staff stated that all members and member agencies were invited to have staff participate on any committee and, in some cases, FSOC members attend committee meetings as well. They also noted that ad hoc staff groups were formed periodically to work on issues that might not fit within the purview of a standing committee. For example, an ad hoc

¹⁹For a detailed description of all the committees, see appendix II.

group helped draft FSOC's 2011 Annual Report, and an ongoing legal working group holds conference calls as needed to address legal issues.

OFR has also taken steps to set up needed management structures. As shown in figure 2, OFR has developed an organizational structure that is built around a Data Center and Research and Analysis Center—the two programmatic units established by the Dodd-Frank Act. OFR has adopted certain hiring policies required under the Dodd-Frank Act, including special salary schedules that are higher than the General Schedule, and used Treasury's existing authority from the Office of Personnel Management for Schedule A excepted hiring.²⁰ In testimony delivered to the House Financial Services Subcommittee on Oversight and Investigations, in April 2012, the Chief Operating Officer described plans to build up to a staffing level of from 275 to 300 staff in the next 2 to 3 years. OFR officials noted that they had relied on a variety of tools to solicit applicants, including letters to academic institutions. OFR's recruitment message has highlighted the opportunity to work on unique data sets and the historic opportunity to build a new institution that would promote financial stability. As of August 15, 2012 OFR had 112 employees. About three-quarters of these employees were direct hires (including 22 reimbursable staff from other Treasury departments) with the other quarter a combination of external detailees and student interns. Although this level is below the target employment level in OFR's budget, it represents marked progress from the second quarter of 2011, when OFR had seven employees and relied mostly on nonpermanent staff.

²⁰These authorities describe special jobs and situations for which it is impractical to use standard qualification requirements and to rate applicants using traditional competitive procedures. Under the Dodd-Frank Act, OFR must seek to maintain comparability of compensation and benefits with other Financial Institutions Reform, Recovery, and Enforcement Act agencies. Accordingly, OFR has adopted the pay and compensation system available at OCC to meet the requirement of the act.

Figure 2: OFR Organizational Chart, as of July 2012

Source: GAO presentation of OFR information.

^aThe Deputy Director of the Data Center is also serving as the Acting Chief Business Officer.

^bThe Chief Counsel reports directly to Treasury's Office of General Counsel.

As it is for any agency, having effective leadership is critical to hiring qualified staff and providing effective governance. OFR has filled five of its eight top leadership positions, but two of the most important positions are not permanently filled: the OFR director and the deputy director of the Research and Analysis Center. A former Treasury official with knowledge of the search process for the director position said that it was difficult to attract a qualified candidate to head the agency for a 6-year term. After 17 months, the President put forth a nominee to head OFR in December 2011 who had been serving as the Counselor to the Secretary since April 2011 and continues to serve in that position. As of July 2012, the nominee is awaiting full Senate confirmation.²¹ Since OFR has also not filled the deputy director position at the Research and Analysis Center, the Chief of Analytical Strategy has assumed responsibility for standing

²¹When OFR has a confirmed director, it will have some autonomy. For example, according to the Dodd-Frank Act, the director's congressional testimony is not to be subject to prior approval by any agency including Treasury or any other FSOC member.

up the Research and Analysis Center, including overseeing the hiring process, determining data needs, and defining the center's objectives and strategy. In June, OFR filled the Data Center Deputy Director position by promoting the Chief Business Officer to this position. The new Data Center Deputy Director will continue to serve as the Acting Chief Business Officer until this position is filled. In addition to these vacancies, a number of lower-level management vacancies remain, including positions at the Research and Analysis Center. For example, none of the assistant director positions under the Deputy Director of Research and Analysis have been filled. In addition, two of five assistant director positions under the Chief Technology Officer are open. However, OFR is not actively looking to fill one of the assistant director positions until the office reaches a mature state and has the need for this additional position.

FSOC and OFR Have Adopted Certain Policies but Could Strengthen Mechanisms to Fully Ensure Accountability and Transparency

FSOC has implemented policies such as bylaws, a transparency policy, and a consultation framework, and members have signed a memorandum of understanding (MOU) on sharing confidential information to govern FSOC activities and promote accountability and transparency. OFR has also adopted policies and procedures for its operations.

- FSOC's bylaws describe the duties of the Chairperson, members of the council, and staff; provide the governance structure for council meetings; and describe some policies for confidentiality and access to information, among other things. The bylaws also allow the Chairperson to appoint, with council approval, an Executive Director and Legal Counsel and to delegate some responsibilities to the Executive Director. As of July 2012, no one had been appointed to these positions. Instead, Treasury staff perform duties associated with these positions, such as providing ethics information to FSOC members.
- The transparency policy commits FSOC to holding at least two open meetings per year but also establishes reasons why other meetings might be closed. For example, meetings may be closed during discussions of supervisory or other market-sensitive information or if an open meeting would result in the disclosure of information contained in investigation, examination, operating, or condition reports; or would necessarily and significantly compromise the mission or purposes of FSOC if it were disclosed. The policy also states that FSOC will release minutes to the public after the meetings.

-
- FSOC's framework for consultation applies to regulations or actions required by the Dodd-Frank Act that must be completed in consultation with FSOC. For example, under the act, the Securities and Exchange Commission (SEC) must consult with FSOC in determining what information is to be collected from certain investment advisers to private funds relating to the assessment of systemic risk. The framework provides a timeline for holding initial meetings, circulating and commenting on staff recommendations, and briefing key policy staff of interested FSOC members on those recommendations.
 - FSOC members also signed an MOU to help ensure confidentiality of nonpublic information. The MOU requires that FSOC members not share this information with anyone outside their member agencies or otherwise specified support staff. Treasury officials and FSOC staff said that the MOU is necessary because it enables council members to share nonpublic information within the council and provides assurance to covered staff that they will not incur penalties for sharing information consistent with the MOU's terms. They noted, for example, that sharing certain supervisory information without such an agreement could carry severe penalties. In June 2012, CIGFO released a report on FSOC's controls over nonpublic information.²² CIGFO found that to date FSOC had shared limited nonpublic information, but this situation will change as OFR builds its capacity. CIGFO also found differences in the way FSOC member agencies marked and handled nonpublic information and noted that not addressing these differences could pose risks to the senders and receivers of such information. The FSOC Data Committee has undertaken a project to address these issues.
 - OFR has adopted policies and procedures for its operations, including those for data security, human resources, budget execution, and procurement. Because data operations are an important feature of OFR's operations, OFR officials said that they had spent significant time on data security architecture, looking at issues of confidentiality, user access, and cyber threats such as hacking. OFR has adopted Treasury procedures for ensuring data security and is expanding its security controls as necessary for OFR-specific systems and data, as

²²Council of Inspectors General on Financial Oversight, *Audit of the Financial Stability Oversight Council's Controls over Non-public Information* (Washington, D.C.: June 2012).

well as for information sharing across FSOC member agencies. To further ensure confidentiality, they have also adopted postemployment restrictions, as required by the Dodd-Frank Act, stating that OFR employees generally may not be employed by or provide advice or consulting services to financial companies for one year after if they have had access to certain confidential information.

In addition, FSOC has some planning under way and OFR has taken some actions and planned others that are consistent with legal requirements or leading practices for new organizations relative to strategic planning and performance management. In our prior work, we have identified three key steps for successful results-oriented organizations—(1) defining clear missions and desired outcomes; (2) measuring performance to gauge progress; and (3) using performance as a basis for decision making.²³ These practices are consistent with the Government Performance and Results Act of 1993, as amended (GPRA), which requires agencies to periodically produce strategic plans, annual performance plans, and performance updates.²⁴ FSOC, which is subject to GPRA, is in the early planning stages of how to satisfy its requirements and may, given its relatively small monetary outlays, request an exemption from certain GPRA requirements from the Office of Management and Budget.²⁵ In the interim, Treasury's strategic plan for fiscal year 2012-2015 describes FSOC and the Treasury Secretary's role as FSOC chairperson, but it does not include information on FSOC's goals or how it will measure FSOC's progress in achieving them.

OFR, which is not independently subject to GPRA, also received limited discussion in Treasury's 2012-2015 strategic plan. Specifically, the plan

²³See GAO, *Executive Guide: Effectively Implementing the Government Performance and Results Act*, [GAO/GGD-96-118](#) (Washington, D.C.: June 1996) and *Results Oriented Cultures: Implementation Steps to Assist Mergers and Organizational Transformations*, [GAO-03-669](#) (Washington, D.C.: July 2, 2003).

²⁴Pub. L. No. 103-62, 107 Stat. 286 (1993), and as amended by the GPRA Modernization Act of 2010, Pub. L. No. 111-352, 124 Stat. 3866 (2011). Performance plans or budgets are intended to provide the direct linkage between an agency's longer-term goals (as defined in the strategic plan) and what its managers and staff are doing on a day-to-day basis and include how resources will be used to accomplish those goals. Performance updates provide feedback to managers, policymakers, and the public on what was actually accomplished for the resources expended.

²⁵Agencies expending less than \$20 million annually may request such an exemption. See 31 U.S.C. § 1117.

notes only that Treasury's Office of Domestic Finance supports OFR and that OFR was created by the Dodd-Frank Act. Similar to other entities within the Treasury such as the Bureau of the Public Debt and the Internal Revenue Service, and consistent with leading practices for new organizations, OFR is undertaking an independent strategic planning and performance management effort. OFR issued a strategic framework in March 2012 to cover fiscal years 2012-2014. In the strategic framework OFR lists five strategic goals, including supporting FSOC through the secure provision of high-quality financial data and by conducting the analyses needed to monitor threats to financial stability; developing and promoting data-related standards and best practices; and providing the public with key data and analyses while protecting sensitive information. The framework also highlights a number of objectives under those goals and lays out implementation priorities for the first year covered by the document, fiscal year 2012. The framework also notes the importance of transparency and that OFR is subject to oversight from the Treasury Office of the Inspector General (OIG) and GAO, which have both exercised that authority during OFR's first two years, and that the Dodd-Frank Act requires that the OFR Director testify before Congress annually on OFR's activities. However, OFR acknowledges within its framework document, that it does not yet have certain other key elements of performance management in place including linking programmatic, human resources, and budgetary decision making to its strategic goals and developing a performance measurement system. The framework identifies establishing these elements of a performance management system among its fiscal 2012 priorities. OFR officials told us that they have begun to link its budget and human resources to strategic goals and that the human resources plan to be submitted to Congress in September 2012 and the fiscal year 2014 budget submission to be issued in 2013 will reflect these linkages.²⁶ They added that at the time they issued the framework, they were not in a position to include performance measures, as the agency was not sufficiently established. However, they plan to include performance measures in their fiscal year 2014 budget submission. In June 2012, the Treasury OIG issued a report on the progress OFR had made in developing an implementation plan that lays out how it will stand up all of its operations and also noted the need to

²⁶OFR's budget submission will be included as part of the President's fiscal year 2014 budget submission that is expected to be released in February 2013.

develop performance measures.²⁷ Without developing and publishing such performance measures, neither the agency nor the public can determine whether OFR's expenditures and activities are most effectively aimed at accomplishing its mission.

In the absence of a strategic plan, FSOC's annual reports serve as a key accountability document. An FSOC policy official said that at this time he views FSOC's annual reports as its strategic planning document. FSOC staff noted that its annual reports provide Congress and the public with a report on FSOC's activities, its views on potential emerging threats to U.S. financial stability, and recommendations to enhance the integrity, efficiency, competitiveness, and stability of U.S. financial markets. They note further that the council's chairperson is required to testify annually before Congress on the report, which serves as an accountability mechanism. When discussing accountability, FSOC members have noted the importance of the statement contained in the front of the reports (and signed by each member) that FSOC is taking reasonable steps to ensure financial stability and mitigate systemic risk.²⁸ FSOC members have also acknowledged the need to follow up on recommendations, and FSOC staff noted that recommendations will be monitored by FSOC as a whole. However, the annual reports do not effectively communicate how FSOC will be held accountable for the actions identified. For example, the annual reports list multiple recommendations that FSOC plans to monitor over time, but do not specify how they will conduct that monitoring. For example, who is going to monitor or implement the recommendations and the recommendations themselves is often vague or unclear, and no time

²⁷Department of the Treasury, Office of the Inspector General, *Dodd Frank Act: Treasury Has Made Progress to Stand-up the Office of Financial Research* (Washington, D.C.: June 27, 2012). The report noted that OFR took longer than expected to finalize a comprehensive implementation plan, which the OIG defined as including OFR's strategic framework, strategic roadmap, other planning documents and individual project plans. The report stated that progress going forward would depend on its ability to execute its plan and recommended that OFR's Chief Operating Officer monitor progress in carrying out the activities in the comprehensive implementation plan and take timely action to address any slippages or otherwise make adjustments to achieve the objectives and keep to the time frames in the plan.

²⁸The Dodd-Frank Act requires individual members to submit a signed statement to Congress to accompany many FSOC reports saying whether they believe that FSOC, the government, and the private sector are taking all reasonable steps to ensure financial stability and mitigate systemic risk that would negatively affect the economy. If they did not believe this the statement would need to indicate what actions the member believes should be taken. 12 U.S.C. § 5322(b).

frames are specified. More specifically, in the 2011 Annual Report some recommendations identified relevant parties only as “market participants” or “regulators” but did not consistently identify the targets of the recommendation or designate parties responsible for monitoring or implementing them. Another recommendation only discusses Dodd-Frank Act reforms, while several others express support for certain aspects of international coordination on financial reforms. In the 2012 Annual Report, FSOC adds some specificity to these recommendations, such as recommending an expeditious implementation of the Dodd-Frank Act. In the 2012 Annual Report, FSOC also more clearly identifies recommendations starting each one with “the council recommends,” but it still does not consistently designate an FSOC member or members to monitor or implement the recommendations nor does it establish time frames for certain actions such as reporting to the council on the status of the recommendation. Treasury officials noted that the Dodd-Frank Act did not give the chairperson or council authority to require that independent regulators take action or impose time frames on them. However, they noted that some recommendations in the 2012 Annual Report were made to specific agencies and put greater stress on more immediate action than others. For example, the report emphasized the importance of a recommendation to SEC to take action to address money market fund risks by saying that wholesale short-term funding markets are a critical component of a well-functioning financial system, and FSOC continues to be focused on structural vulnerabilities in money market funds that could disrupt these markets. Enhancing FSOC’s accountability could lead to more effective oversight and public confidence in financial institutions and markets.

In addition, while FSOC releases minutes from its meetings, as required by its bylaws, it does not keep detailed records of deliberations or discussions that take place at these meetings or at the committee level. While no specific level of detail is required for FSOC minutes, the limited documentation of their discussions makes it difficult to assess FSOC’s performance. Another deliberative body, the Federal Reserve’s Federal Open Market Committee, keeps transcripts of its meetings and voluntarily releases these transcripts to the public after 5 years. Releasing the transcripts after a period of time should allow the members of the committee to talk freely and provides documentation that can be used to assess the entity’s performance and monitor their decision making process.

FSOC and OFR Have Taken Steps to Build Mechanisms to Identify Potential Threats to Financial Stability, but More Work Is Needed to Realize This Goal

FSOC has taken steps to meet its statutory responsibilities related to identifying risks and potential emerging threats to U.S. financial stability, but has not yet developed comprehensive and systematic mechanisms to realize these goals. These steps include setting up the Systemic Risk Committee that is responsible for systemic risk monitoring and plays a key role in reviewing sources of systemic risk. Potential threats to financial stability are also discussed at FSOC meetings; for example, FSOC officials noted that a teleconference was convened to discuss MF Global. The Systemic Risk Committee generally meets every 2 weeks and is co-chaired by the Commodity Futures and Trading Commission (CFTC), FDIC, the Federal Reserve, and SEC. The committee is operating under draft procedures in which member agency staff suggest risks or threats that, in their view, may benefit from interagency coordination.²⁹ In December 2011, FSOC members' staff provided 40 suggestions, which FSOC policy staff grouped into categories for discussions at the committee's monthly meetings. According to FSOC policy staff, if there is agreement that an issue would warrant further examination, an agency is assigned to develop the issue, including identifying vulnerabilities in the financial system. When the committee determines the issue is sufficiently developed, it presents the issue to the Deputies Committee. Sending some issues to the Deputies Committee sooner than others does not imply that the committee attaches greater importance to the issue but only that enough analysis has been completed to allow it to move forward. According to the draft procedures, if issues are elevated beyond the Deputies Committee to FSOC members, agencies may respond with a variety of actions, including enhanced monitoring, additional analysis, the development of potential policy responses, or the implementation of a particular policy response.³⁰

OFR participates in the Systemic Risk Committee and is building capacity to monitor the financial system for threats to financial stability. OFR has developed the Financial Stability Monitor, a collection of metrics and indicators related to financial stability that is to be continuously updated, according to OFR and Treasury officials. According to these officials,

²⁹FSOC officials noted that the procedures were marked draft because this is a new process and the committee expected to change the procedures based on its initial experience.

³⁰In some circumstances, such as rapidly evolving risks, the discussion can be fast tracked to FSOC members for a discussion of potential responses.

OFR began sharing the Financial Stability Monitor with the Systemic Risk Committee and FSOC member agency staff in February 2012. OFR is assessing options for analyzing risks to financial stability and produced a working paper in collaboration with outside researchers, published in January 2012, to survey existing approaches.³¹ In addition, OFR and FSOC sponsored a conference in December 2011 to discuss data and technology issues and analytical approaches for assessing threats to financial stability.³²

Although they are building some mechanisms to identify risks to the U.S. financial system, FSOC and OFR have not yet developed and implemented systematic and comprehensive mechanisms for identifying and monitoring these risks. A systematic approach would incorporate both rigorous methods—such as quantitative indicators and models—to assess vulnerabilities of the financial sector, as well as qualitative inputs to account for any shortcomings of the quantitative models or gaps in available data. A comprehensive approach would better ensure that all relevant aspects of the financial system are considered and analyzed. The Systemic Risk Committee procedures may facilitate analysis of risks that could benefit from interagency discussions and responses, but these procedures may not help to identify new risks or threats that FSOC member agencies have not already identified on their own. Without a more systematic approach and comprehensive information, FSOC member agencies, on their own, may not be well positioned to judge which potential threats will benefit from interagency discussions. FSOC and OFR could improve their efforts to identify risks and threats by collecting and sharing a common set of financial indicators.³³ Systematic collection, analysis, and sharing of financial indicators of key risk factors such as leverage, liquidity, concentrations, underwriting standards, collateral quality, and delinquencies should provide insight into vulnerabilities affecting particular types of financial intermediaries or

³¹Dimitrios Bisias, Mark Flood, Andrew W. Lo, and Stavros Valavanis, *A Survey of Systemic Risk Analytics*, Office of Financial Research Working Paper #0001 (Washington, D.C.: Jan. 15, 2012).

³²The Macroprudential Toolkit: Measurement and Analysis. Conference held in Washington, DC: December 1-2, 2011.

³³Such a data-sharing exercise is akin to what the International Monetary Fund proposes with its Financial Soundness Indicators. See International Monetary Fund, *Financial Soundness Indicators: Compilation Guide* (Washington, D.C.: March 2006).

reveal patterns occurring across the financial system. OFR, through a mechanism such as the Financial Stability Monitor, could play a role in collecting, analyzing, and reporting on these indicators. A senior OFR official told us that this was the ultimate intent of the Financial Stability Monitor. A sample of the Financial Stability Monitor that we reviewed included, among other topics, some indicators of leverage and liquidity that were based on data from the federal banking agencies and purchased databases.

Many analytical tools have been developed by researchers or are in use by international bodies to assess the risk of a financial crisis or identify vulnerabilities in the financial system. Some of these tools—such as early warning models—can be useful to assess the overall level of risk in the financial system, while others, such as system-wide stress testing, could be helpful in identifying new vulnerabilities and interconnections (see fig. 3). In general, these tools are methods of integrating large volumes of financial information to generate specific insights about financial stability. Experts we spoke with were generally supportive of developing and using such tools for monitoring risks to financial stability and also emphasized the importance of using multiple tools. These tools, which all have useful features as well as shortcomings, may complement each other, and exploring a variety of tools will provide insight into which ones will be the most effective. According to FSOC policy staff, FSOC has not formally considered whether to develop early warning models or conduct system-wide stress tests. OFR staff said they are evaluating a range of metrics and methods that had been proposed for measuring and analyzing financial markets and systems and are in the early stages of developing network maps and other tools to assess financial stability. OFR evaluated 11 measures against a series of crises over time and reported on some of these efforts in its 2012 Annual Report.³⁴ In addition, OFR has a statutory responsibility to report on stress testing, and OFR officials told us that they interpreted that responsibility as contributing to the development and evaluation of quantitative tools that are used in stress tests, improving the data used in stress tests, and helping to advance the state-of-the-art in stress test methodologies. As such, OFR's survey of systemic risk approaches described several stress testing models and the OFR Annual Report noted that methodologies will need to advance to expose

³⁴Office of Financial Research, *2012 Annual Report* (Washington, D.C.: July 2012).

vulnerabilities in the financial system as a whole. OFR would support FSOC in evaluating system-wide stress tests, according to OFR officials.

Figure 3: Selected Tools for Monitoring Risks to Financial Stability

Early warning models 	Early warning models have been widely studied and their relative merits are well understood.^a Researchers have found that these models would have provided useful signals of financial stress before the 2007-2009 financial crisis.^b Early warning models typically combine a number of financial indicators and determine which combination would have best predicted previous financial crises. The optimal combination is then used to forecast the likelihood of future financial crises. Some models emphasize a small number of high-level financial indicators, such as the total supply of credit in the economy, bank capital and liquidity, and measures of asset prices. Other models integrate information from a larger number of financial indicators, including the money supply, exchange rates, and measures of the balance of international trade, as well as the supply of credit and asset prices.
Financial stability mapping 	Financial stability mapping is another technique for representing aspects of the degree of risk in the financial system. The goal of this approach is to provide a visual representation of risk that can more easily reveal patterns. Researchers at the European Central Bank (ECB) and International Monetary Fund (IMF) have developed financial stability mapping approaches.^c The financial stability map developed by ECB researchers—not yet in use by ECB—is designed to monitor vulnerabilities by locating a country in the financial stability cycle: precrisis, crisis, postcrisis, or tranquil. The approach at IMF, known as the Global Financial Stability Map, has been in use since 2007. IMF's map is intended to provide a graphical representation of IMF's assessment of financial stability based on six factors: macroeconomic risks, emerging market risks, credit risks, market and liquidity risks, risk appetite (the willingness of investors to take on risk), and monetary and financial conditions. In assessments by the respective researchers, both IMF approach and the approach developed by ECB researchers provided some early warning indications of financial stress.
System-wide stress testing 	One approach that would take advantage of the varying supervisory responsibilities of FSOC member agencies is system-wide stress testing, or stress testing that is designed to evaluate the broader financial system and understand linkages between the different markets and institutions. Stress testing is a technique for assessing the resilience of financial institutions or systems to extreme events. In contrast to the Federal Reserve's stress testing of large bank holding companies, a system-wide approach would stress different types of financial intermediaries (e.g., banks, money market funds, and insurance companies) to understand not just how intermediaries would fare in stress scenarios, but also how their responses would affect other financial intermediaries. Linkages between types of financial intermediaries were found in retrospect to have been critically important during the 2007-2009 financial crisis, and several groups, including OFR, have emphasized the importance of assessing interconnections between institutions when performing stress tests.^d Nevertheless, these groups have also acknowledged the analytical and practical challenges associated with analyzing linkages among financial institutions. Alternatively, "top down" or "macro" stress tests rely less on institution-specific information and more on estimated relationships between the financial system and the economy.

The Bank of England also recently completed work on a model featuring interconnections in the banking industry to examine the potential impact of various stress scenarios on the UK financial system. See David Aikman and others, *Funding Liquidity Risk in a Quantitative Model of Systemic Stability*, Bank of England Working Paper 372 (London: June 2009).

Limited Public Information Hinders Understanding of FSOC's and OFR's Activities and Progress

Although FSOC and OFR have adopted communication methods to provide information to the public and Congress on their activities, some of their methods could be strengthened. For example, both entities have web pages on Treasury's website. FSOC's web pages include minutes of the council's meetings, annual reports, frequently-asked-questions, and information on FSOC rulemakings. OFR has also posted key documents on its web pages, including its annual report, strategic framework, and updates on recent developments, such as the status of the legal entity identifier.³⁵ OFR's first annual report discusses its activities and agenda for the next year, and its approach to researching financial stability as well as current threats. The annual report also covers other topics including data gaps in the areas of leverage, liquidity, and interconnectedness as well as the benefits of data standards. Treasury officials also provided us with examples of emails they have sent to congressional committees on key FSOC or OFR products or actions, such as the designation of nonbank financial companies, and described the wide range of correspondence they respond to on congressional inquiries involving both entities.

³⁵The legal entity identifier is a new a universal standard for identifying all parties to financial contracts. This will be discussed in more detail later in the report.

FSOC releases the minutes of its meetings. However, the minutes describe general agenda items for the meetings and information on the presenters for each agenda item and lack additional detail even when the information being discussed is not likely to be market sensitive or limit the quality of deliberations. For example, the meeting minutes for October 11, 2011, show that several presentations were given during an executive session, including one on money market reform updates. The minutes provide the names of those who gave the money market presentation and note that updates were provided on actions taken since the last presentation on the topic. However, the minutes lack any content of the actual presentation or discussion.³⁶ Specifically, the minutes say the following.

“Money Market Fund Reform Update

“The Chairperson then turned to the agenda item regarding an update on money market fund reform and called on Robert Plaze, Associate Director, Division of Investment Management, SEC, Matthew Eichner, Associate Director, Division of Research and Statistics, Federal Reserve, Matthew Rutherford, Deputy Assistant Secretary for Federal Finance, Treasury, to make the presentation. The individuals listed above provided the presentation which included a review of the actions taken since the last presentation regarding money market fund reform to the Council, the reform options under consideration, and next steps.

The members of the Council asked questions about the presentation.”

In addition, in our review of meeting minutes for meetings held from October 2010 through December 2011, we found that minutes from more recent meetings generally have less detail than those from earlier ones. As a result, the public receives little information about FSOC’s activities and deliberations, which limits the public’s understanding of its activities. More recently, however, FSOC provided additional transparency on a key decision—its 2012 Annual Report provides extensive information on the designation of FMUs as systemically important, including the names of the designated entities and a discussion of the reasons for their designation.

³⁶FSOC, Minutes of the Financial Stability Council: held October 11, 2011, accessed Jan. 17, 2012, <http://www.treasury.gov/initiatives/fsoc/Pages/council-meeting-minutes.aspx>.

FSOC policy officials acknowledged that the issue of transparency is challenging. They recognized the need for transparency but also noted that certain information is protected from disclosure under various statutes and cannot be released. FSOC staff also noted the need to balance the desire for transparency with the need to provide an environment that allows for open discussion and deliberation of issues and policy options. As we have previously reported, transparency is a key feature of accountability even when there is a need to safeguard certain sensitive information to protect the marketplace.³⁷ In addition, the Freedom of Information Act (FOIA) recognizes that deliberative processes also need to be safeguarded so that decision makers can have meaningful discussions and certain information that FSOC considers, such as that collected by bank supervisors, is prohibited from public disclosure. However, similar bodies, such as the Federal Open Market Committee and the Interim Policy Committee in the UK—an entity that has a similar role to FSOC’s—publishes minutes that provide greater detail. Although the Federal Open Market Committee makes certain announcements on the day it meets, after a 3-week delay, it publishes its more detailed meeting minutes, which usually include a detailed discussion of developments in financial markets and the economy, committee member views, and an explanation of committee policy actions. In addition, as noted earlier in this report, 5 years after its meetings, the Federal Open Market Committee voluntarily releases transcriptions of those meetings. The minutes of the Interim Policy Committee in the UK provide information on what the committee discussed and an update on the health of the economy, including threats to financial stability.

Additionally, neither FSOC nor OFR has taken full advantage of modern communication tools to communicate information about their activities or progress. While using a search engine, such as Google, identifies web pages for both entities on Treasury’s website, the pages are not easy to locate from Treasury’s homepage nor are the sites user friendly. For example, the FSOC and OFR web pages are in a section of Treasury’s website called Initiatives and are further embedded under a section titled Wall Street Reform. While FSOC does post the dates and times of its meetings on its web page, this information is in a link at the bottom of the

³⁷ See, GAO *Troubled Asset Relief Program: Continued Stewardship Needed as Treasury Develops Strategies for Monitoring and Divesting Financial Interests in Chrysler and GM*, [GAO-10-151](#) (Washington, D.C.: Nov. 2, 2009).

page rather than being prominently displayed. In addition, FSOC does not have an online service that regularly alerts interested parties to changes to its web pages or upcoming meetings. Further, one member of FSOC noted that FSOC relies on emails to members and staff rather than having a portal where members can access needed information more easily and securely.

OFR's web pages have been evolving over time especially during July and August of 2012, but it could further improve its website. For example, we had noted in June 2012 that OFR did not consistently display agency testimonies in the same place; in August 2012, OFR rectified these omissions. Similarly, in March 2012, OFR told us that the Treasury daily blog provided information about OFR activities, but timely notices relevant to OFR have not regularly appeared there. For example, many of the recent developments related to global approval of the legal entity identifier, which OFR cites as a major endeavor, have not appeared in a timely manner. In July 2012, OFR added an online service to its own web pages to inform those who register that updates have been made to the site, but there was a delay in having the feature work consistently. However, OFR has not posted some information that would show the progress the agency is making in standing up its operations, such as its organization chart including the names of its top managers. In comparison, the Consumer Finance Protection Bureau, which was also created by the Dodd-Frank Act, has for some time had its own domain name, an easily identifiable website that includes an organization chart, and online services that provide regular updates to interested parties.

Some industry representatives, academics, and former government officials have questioned the progress that the new entities have made. Some industry representatives with whom we spoke said that they did not believe that FSOC and OFR had met their expectations for streamlining regulatory requirements (e.g., responding to data requests), improving coordination on new regulations, or providing new information on systemic risks. Some members of FSOC and their staffs said that they learned a great deal from working on and reading the 2011 Annual Report; however, some industry representatives with whom we spoke said that they did not find that report useful. Among other concerns, industry representatives told us that the report did not contain any new information on systemic risks or the status of Dodd-Frank act reforms. In addition, a group of former government officials, academics, and industry representatives convened the Systemic Risk Council in June 2012 to address concerns that they said stemmed, in part, from the lack of progress made by the members of FSOC and OFR. They said that their

concern increased each day that the implementation of systemic reform languished. The Systemic Risk Council also noted that it was essential for FSOC to provide clear and transparent explanations of regulatory reforms in a way that the general public could understand. Communicating more effectively with groups critical to their missions and the public could improve FSOC's and OFR's ability to effectively and efficiently achieve their missions.

FSOC and OFR Have Taken Steps to Collaborate but Could Enhance Their Efforts

The Dodd-Frank Act recognizes the importance of collaboration and requires FSOC and OFR to collaborate on various activities. Effectively building mechanisms to identify risks and potential emerging threats to U.S. financial stability will also require FSOC and OFR to collaborate with a number of internal and external stakeholders. To date, FSOC and OFR have taken steps to promote collaboration; however, they could enhance collaboration by more fully incorporating some key elements of effective collaboration. Taking full advantage of opportunities to work with stakeholders could strengthen FSOC's and OFR's ability to carry out their missions. For example, in testifying about the need to coordinate agency rulemakings, FSOC's Chairperson noted the importance of coordinating both domestically and internationally to prevent risks from migrating to regulatory gaps—as they did before the 2007-2009 financial crisis—and to reduce U.S. vulnerability to another financial crisis. In addition, effective collaboration could eliminate unnecessary duplication for both the industry and regulators.

The Dodd-Frank Act Recognizes the Importance of Collaboration to FSOC's and OFR's Missions

Recognizing the importance of collaboration to FSOC's and OFR's missions, the Dodd-Frank Act assigns specific collaboration duties and responsibilities to these new entities. Title I of the act directs FSOC to facilitate information sharing and coordination among its member agencies and other federal and state agencies regarding domestic financial services policy development, rulemaking, examinations, reporting requirements, and enforcement actions.³⁸ In addition, FSOC must consult with the primary financial regulatory agency, if any, before designating a nonbank financial company for supervision by the Federal Reserve.

³⁸12 U.S.C. § 5322(a)(2)(E).

The Dodd-Frank Act also encourages collaboration between FSOC and external stakeholders, especially state regulators and international entities. For example, it permits FSOC to appoint technical and professional advisory committees which could include industry representatives and academics as well as state regulators that may be useful in carrying out the council's functions. The act eases the creation of committees by generally exempting them—and FSOC—from the Federal Advisory Committee Act (FACA), which requires agencies to adhere to a formalized process to ensure that committees are objective and accessible to the public.³⁹ The act also directs the FSOC chairperson, in consultation with FSOC members, to regularly consult with financial regulatory entities and other appropriate organizations of foreign governments or international organizations on matters relating to systemic risk to the international financial system. Further, when designating foreign nonbank financial companies for supervision by the Federal Reserve, FSOC must consult with appropriate foreign regulatory authorities, to the extent appropriate.

The Dodd-Frank Act also specifies a number of duties for OFR that require collaboration with FSOC members and others. In particular, OFR must collect data on behalf of FSOC, provide the data to FSOC and member agencies, and standardize data collection among the agencies.⁴⁰ These activities require collaboration not only with FSOC member agencies but also with commercial data providers, publicly available data sources, and the financial industry. In addition, like FSOC, OFR can appoint technical and professional advisory committees to help leverage necessary resources, but these are not exempt from FACA.

FSOC and OFR Have Taken Steps to Promote Collaboration

FSOC and OFR have taken steps to enhance collaboration among FSOC members and member agencies and with external stakeholders. Members' staffs stated that FSOC's organizational and committee structures help support collaboration both on a formal and informal basis. Through these committees, staff from member agencies said they have

³⁹ 5 U.S.C. App. 2.

⁴⁰ The Dodd-Frank Act provides that member agencies, in consultation with OFR, must implement regulations promulgated by OFR to standardize the types and formats of data reported and collected on behalf of FSOC. However, it also explicitly notes that this provision does not supersede or interfere with the independent authority of a member agency under other law to collect data in such format as the agency requires.

developed good working relationships with staff from other agencies. Prior to FSOC, two means of collaborating were the President's Working Group on Financial Markets and the Federal Financial Institutions Examination Council.⁴¹ Members' staffs noted that communication within FSOC had been broader and deeper than in either of those forums because staff from more agencies participate in FSOC at various levels. For example, staff said that various FSOC committees and working groups have allowed staff to develop contacts at other agencies with whom they can consult and share information on a variety of topics. In addition, staff said that through FSOC they had become acquainted with others having different expertise and have had the opportunity to share their views and experience with others. For example, the independent insurance member and his staff noted that they had used FSOC as a forum to provide information on insurance companies' use of money market funds, which may differ from the more common retail fund mechanisms.

Through the committee structure, FSOC members' staffs also noted that agencies had leveraged their joint expertise and resources to carry out FSOC's statutory responsibilities, including rulemakings. For example, an ad hoc interagency lawyers group was formed shortly after the passage of the Dodd-Frank Act to provide regular input into the rulemaking process. The standing committees also provide input on rulemakings dealing with issues within their areas of expertise. In addition, throughout the rulemaking processes the Deputies Committee was briefed regularly, especially on issues that could not be resolved in other committees or working groups. The deputies kept their respective FSOC members informed throughout the rulemakings.

We discussed with Treasury staff the FSOC chairperson's consultations with financial regulatory entities and other appropriate organizations of

⁴¹The President's Working Group on Financial Markets was established by an executive order in 1988, in response to the 1987 market crash. Executive Order 12631 of March 18, 1988, 15 U.S.C. § 78b note. The Federal Financial Institutions Examination Council (FFIEC) was established in 1979, pursuant to the Federal Financial Institutions Examination Council Act of 1978, 12 U.S.C. §§ 3301-3311. It is a formal interagency body empowered to prescribe uniform principles, standards, and report forms for the federal examination of financial institutions by the Federal Reserve, National Credit Union Administration, FDIC, OCC, and the State Liaison Committee, and to make recommendations to promote uniformity in the supervision of these financial institutions. The Dodd-Frank Act added the Consumer Financial Protection Bureau to FFIEC. The President's Working Group and FFIEC remain in place.

foreign governments or international organizations on matters relating to systemic risk to the international financial system. Treasury staff noted that the FSOC chairperson, who is also the Secretary of the Treasury, has regular contact with foreign officials and shares information from these interactions with other U.S. regulators at FSOC meetings. They said that they have monitored these activities and believe that FSOC is complying with the Dodd-Frank requirement.

Further, OFR has taken some actions to collaborate by leveraging the expertise of external stakeholders and coordinating U.S. activities internationally. In particular, FSOC and OFR held a joint conference in December 2011 to discuss data and technology issues and analytical approaches for assessing threats to financial stability. The conference included attendees from the financial regulatory community, academia, public interest groups, and the financial services industry. OFR has also initiated a working paper series in which OFR researchers have collaborated with outside academics to catalog systemic risk monitoring systems and ways to improve risk management at financial institutions. In addition, OFR has invited experts on various aspects of financial stability to give seminars to OFR and FSOC policy staff. OFR has also announced plans to create the Financial Research Advisory Committee to solicit advice, recommendations, analysis, and information from academics, researchers, industry leaders, government officials, and experts in the fields of data and technology. Applications were due in April 2012, and in August 2012 OFR officials said that the list of applicants was in the final stage of review. OFR officials also noted that they play a key role on FSOC's Data Committee, which supports coordination of and consultation on issues related to FSOC data collection and sharing.

In addition, OFR is working to standardize data reporting systems among FSOC member agencies. OFR officials noted that the agency had begun a three-stage process to assemble an inventory of data collected by FSOC member agencies as a first step toward standardizing data, reducing duplication, and eventually lowering costs for industry and regulators. The three stages examine data (1) purchased by the agencies, (2) collected through regulatory activities, and (3) derived by the agencies from data they purchased or collected. An OFR official said that the first phase was complete but had taken longer than initially envisioned because of the complexities of the project including agencies' use of different terminology for the same databases. For instance, the official noted that it had been difficult to create an effective survey instrument to capture the data purchased by the agencies, because the survey instrument had to capture the different terminology used by the

various agencies. OFR officials said that they expected the process to allow them to determine when multiple agencies used the same data, identify data gaps more effectively, and seek potential savings in data acquisition. For example, they have been able to negotiate contracts that provide the small office of the independent insurance member of FSOC with access to expensive private databases. OFR officials said that OFR is also working with FSOC member agencies through FSOC's Data Committee to address differences in existing security classification systems and support efficient, secure data-sharing efforts given the statutory responsibilities agencies have to ensure the confidentiality of certain data. Many industry representatives with whom we spoke said that this project could help relieve regulatory burdens by standardizing data-reporting systems and reducing duplication, noting that currently multiple agencies ask for the same data but in different formats or at different times.

Moreover, OFR has collaborated with industry, foreign government entities, and international bodies to create a legal entity identifier, which OFR describes as an emerging global standard that will enable regulators and companies around the world to quickly and accurately identify parties to financial transactions. Building on earlier industry and interagency efforts and on CFTC's and SEC's responses to mandates on data standards, OFR led U.S. government efforts to promote global adoption of the identifier. Within the expert group appointed by the Financial Stability Board to develop recommendations for the Group of 20 (G20) countries regarding the identifier, OFR led the U.S. consultative group, and OFR staffers have been leading singly or jointly the development of a governance framework and operating protocols.⁴² The Financial Stability Board endorsed the expert group's recommendations in May 2012. In June 2012, the G20 endorsed the proposal, which includes a target for implementing a legal entity identifier system globally, with some allowance for variation across countries, by March 2013. OFR continues to serve as the vice-chair for the Americas on the group charged with implementing the identifier.

⁴²The Group of 20 (G20) is a group of finance ministers and central bank governors from 19 countries—including the United States—and the EU. The Financial Stability Board brings together from the G20 countries central bank officials, finance and treasury officials, and financial institution regulators; officials of the International Monetary Fund and World Bank, and representatives from non-G20 countries to address issues related to global financial stability.

FSOC Could Enhance Collaboration by Incorporating Key Practices

While the previous examples show the progress FSOC and OFR have made in terms of promoting collaboration, other examples suggest that additional actions are needed. In our prior work, we have identified practices that agencies can use to enhance and sustain their collaborative efforts. These include identifying and addressing needs by leveraging resources, agreeing on roles and responsibilities, and establishing mutually reinforcing or joint strategies.⁴³ The examples below highlight areas in which FSOC's collaboration efforts could be enhanced by more fully reflecting these principles.

Leveraging resources. FSOC has not taken advantage of opportunities to leverage resources through its authority to appoint technical and professional advisory committees. In addition to state regulators and council members, the Dodd-Frank Act specifies that such committees could include other persons. Such persons could be those from the industry and academics. Industry representatives have commented on the benefits of having industry input through such a committee, but, to date, FSOC has not established such committees. Moreover, the ability of FSOC members to leverage expertise varies. For example, while FSOC members from federal regulatory agencies are able to draw on staff from across their agencies, the independent insurance member and state representatives have limited support structures. The state representatives are limited by the number of support staff that have been allowed to sign required confidentiality agreements and this may limit these members' access to certain regulatory expertise. The representative of state insurance regulators noted that he must rely solely on his limited department staff and a small group of staff from the National Association of Insurance Commissioners that have been detailed to his department and have signed the confidentiality agreement to support his FSOC activities, including committee representation. In a letter to the FSOC Chairperson, the National Association of Insurance Commissioners and the State Insurance Representative that is a member of FSOC, stated that the State Insurance Representative had been prohibited from discussing or

⁴³See [GAO-06-15](#). Other practices include developing mechanisms to monitor, evaluate, and report on results; reinforcing agency accountability for collaborative efforts through agency plans and reports; and reinforcing individual accountability for collaborative efforts through performance management systems.

seeking guidance from other relevant state regulators even on a confidential basis. Subsequent to this letter, FSOC issued an “operational interpretation” of the MOU on the treatment of nonpublic information. This interpretation states in part that the MOU does not prevent an FSOC member from consulting or discussing with anyone FSOC proposals, rules or other matters provided that the member does not (1) disclose specified types of confidential information; (2) attribute nonpublic proposals, rules or other matters to FSOC or any of its members or (3) disclose their views on such matters.

Similarly, the representative of the state banking regulators is supported by four staff from the Conference of State Bank Supervisors and the representative of the state securities regulators by two staff from the North American Securities Administrators Association. The state banking member’s staff noted that Treasury had worked with the state members to secure their assistance, and that the State Banking Supervisor generally had adequate staff support. However, they did note that they think the process limited access to other state banking supervisors with specialized expertise. For example, they noted that they might want to consult with New York banking staff on international issues before FSOC, but confidentiality restrictions limit them to sharing information on FSOC matters only with the member, his state banking staff, and others who have signed a confidentiality agreement. In addition, the FSOC state insurance representative and his staff told us that because of the confidentiality restrictions, they had limited their discussions at International Association of Insurance Supervisors meetings, because they thought they could not speak to issues being discussed within FSOC.

Agreeing on roles and responsibilities. As noted earlier, FSOC is tasked with monitoring the financial services marketplace to identify potential threats to U.S. financial stability, and OFR must develop and maintain metrics and reporting systems for risks to U.S. financial stability as well as monitor, investigate, and report on changes in system-wide risk levels. These responsibilities overlap somewhat, but this overlap is not unexpected given OFR’s primary mission of supporting FSOC. FSOC and OFR staff cited their statutory responsibilities for monitoring risks to U.S. financial stability as the reason that both organizations are pursuing efforts in this arena. FSOC and OFR staff also noted that OFR participates on the Systemic Risk Committee, allowing for some

coordination of efforts. The Dodd-Frank Act defines certain responsibilities for FSOC and OFR, but, the lack of clear responsibility for implementation can lead to duplication, confusion, and gaps in their efforts. This risk is further compounded by the fact that many FSOC member agencies have risk analysis and data collection functions associated with their supervisory responsibilities. Some of these functions are explicitly focused on risks to financial stability, and some member agencies have created their own programs to examine these risks. For example, in 2010 the Federal Reserve created an Office of Financial Stability Policy and Research to identify and analyze potential threats to financial stability. FDIC, SEC, and the Federal Housing Finance Agency have also created offices in recent years to monitor risks to financial stability originating in their regulated markets. To the extent that these programs provide unique information to FSOC, they will be contributing to the overall effort. However, if not properly coordinated, these separate efforts could be duplicative, resulting in wasted time and resources.

Establishing reinforcing or joint strategies. To achieve a common outcome, collaborating agencies need to establish strategies that work in concert with those of their partners or that are joint in nature. Such strategies help in aligning activities, core processes, and resources to reach a common outcome. In this area, FSOC has taken actions to better coordinate members' rulemakings. In October 2010, it issued an integrated implementation road map for the Dodd-Frank Act that included a list of the rules regulators were required to promulgate, provided a time line for those rulemakings, and identified the agencies responsible for each rulemaking. FSOC has also developed a consultation framework for the agencies involved in rulemakings where consultation is required by the Dodd-Frank Act. The framework establishes time frames for coordinating three tasks: initial interagency meetings, circulation of term sheets for interagency comments, and circulation of proposed rules for interagency comments. In a November 2011 report, we noted that although FSOC's road map and consultation framework were a positive development in facilitating coordination, they had limited usefulness.⁴⁴ For

⁴⁴See [GAO-12-151](#).

example, the consultation framework does not provide, nor according to FSOC staff is it intended to provide, any specifics about staff responsibilities or processes to facilitate coordination. For example, it does not mention the extent to which interagency coordination is required or what happens when rulemakings conflict with or duplicate each other. As a result, we recommended that FSOC work with the federal financial regulatory agencies to establish formal coordination policies that would clarify issues such as the timing of coordination, the process for soliciting and addressing comments, and FSOC's role in facilitating coordination.⁴⁵ To date, FSOC has not implemented this recommendation. Industry representatives with whom we spoke also questioned why FSOC could not play a greater role in coordinating member agencies' rulemaking efforts. As an example of how coordination could be improved, representatives noted that FSOC's rule and interpretive guidance on designating nonbank financial companies for Federal Reserve supervision was finalized before the Federal Reserve had issued a rule laying out the requirements for determining whether a company would fall within the statutory definition of a financial company.⁴⁶ FSOC and Federal Reserve staff said that after the timetable was set for the FSOC rule, the Federal Reserve decided that it needed to clarify some issues with its rulemaking, creating the anomaly of having a process for designating financial companies before the requirements for meeting the definition of a financial company had been adequately identified. The Secretary of the Treasury, FSOC's Chairperson has noted in testimony before the Congress that he does not have the power to force FSOC members to collaborate on rulemakings.

⁴⁵See [GAO-12-151](#).

⁴⁶Section 102(a)(4) of the Dodd-Frank Act defines a nonbank financial company for purposes of title I of the act as a domestic or foreign company (other than a bank holding company or certain other types of firms) that is predominantly engaged in financial activities as specified in section 102(a)(6).

FSOC Has Issued Rules and Reports but Processes May Not Ensure That Ongoing Activities Have the Intended Results

The Dodd-Frank Act requires FSOC to consult on a number of regulatory agency rulemakings, but it gave FSOC a few responsibilities that have led it to issue its own rules. These responsibilities include the authority to designate FMUs as systemically important and nonbank financial companies for supervision by the Federal Reserve under its enhanced prudential standards and to reevaluate the latter designations annually. While individual designations are not made by rule, in an effort to be more transparent, FSOC has issued rulemakings explaining the processes and criteria it will follow in making the individual designations. However, FSOC is not required to and has not developed a separate process to assess the overall impact of these designations including whether they are having the intended result of improving U.S. financial stability. The Dodd-Frank Act also mandated that FSOC issue a number of reports during its first two years, and FSOC has issued these by the mandated due dates. Most of these were one-time reports; however, FSOC is also mandated to report annually on a number of items, including potential emerging threats to financial stability. Both the 2011 and 2012 Annual Reports identify a number of threats, but they do not use a systematic forward-looking process for doing so. As a result, the reports may not be providing the public and Congress with the best information for guiding their decisions relative to these threats.

FSOC Has Issued Rules on Processes for Designating Certain Financial Entities for Additional Supervision and the Freedom of Information Act

The Dodd-Frank Act provided FSOC with the authority to designate FMUs as systemically important. FMUs are to be considered systemically important if FSOC determines that the failure of an FMU or a disruption in its functioning could threaten U.S. financial stability. Similarly, the Dodd-Frank Act provided FSOC with the authority to designate nonbank financial companies for supervision by the Federal Reserve under its enhanced prudential standards.⁴⁷ The act stipulates that FSOC may designate these companies for Federal Reserve supervision if material financial distress at that company, or the nature, scope, size, scale, concentration, interconnectedness, or mix of the activities of the company, could pose a threat to U.S. financial stability. The Federal

⁴⁷The Dodd-Frank Act also subjects large bank holding companies with total consolidated assets of \$50 billion or more to enhanced supervision and prudential standards. No FSOC designation is required for these bank holding companies to be subjected to enhanced supervision and standards. In addition, some potential nonbank holding companies that may be designated are already subject to some Federal Reserve oversight because they are thrift holding companies. The Dodd-Frank Act transferred the oversight of these companies from the Office of Thrift Supervision to the Federal Reserve.

Reserve has not issued final rules on its enhanced prudential standards, but other final rules that will apply to designated nonbank financial companies have been issued. These rules include a rule on resolution plans or “living wills,” jointly issued by the Federal Reserve and FDIC that will require designated nonbank financial companies to prepare resolution plans and a rule, issued by the Treasury, which establishes an assessment schedule for the Financial Research Fund—the fund that finances OFR and FSOC under the Dodd-Frank Act.⁴⁸

FSOC issued final rules on the processes FSOC intends to use for designating FMUs as systemically important and nonbank financial companies for Federal Reserve supervision in July 2011 and April 2012, respectively. In accordance with the Dodd-Frank Act, both rules specify that two-thirds of FSOC’s voting members, including the chairperson, must vote to designate FMUs and nonbank financial companies. Each rule, with any accompanying interpretive guidance, also outlines a multistage process that FSOC intends to follow in designating these entities, including a process for designated entities to request an FSOC hearing before the designation becomes final. In its 2012 Annual Report, FSOC reported that it had designated eight FMUs as systemically important. In contrast, FSOC has not yet designated any nonbank financial companies.

In April 2012, FSOC also issued a rule implementing the Freedom of Information Act (FOIA).⁴⁹ The Dodd-Frank Act states that FOIA, including its exceptions from disclosure, applies to any information submitted to FSOC or OFR under title 1 of the act. It further states that FSOC, OFR, and member agencies are to maintain the confidentiality of such information if that confidentiality is protected from public disclosure by federal or state law.⁵⁰ While FOIA would apply with or without a rule,

⁴⁸Other Dodd-Frank provisions impose additional requirements on large bank holding companies and nonbank financial companies designated by FSOC. These include a requirement that the Federal Reserve subject designated nonbank financial companies that engage in proprietary trading to additional capital requirements, the authority of CFTC to impose limitations on the ability of those companies to control derivative clearing organizations and exchanges, and the ability of FDIC to impose risk-based assessments on large bank holding companies and designated nonbank financial companies if necessary to repay any obligations issued by FDIC to Treasury under the orderly liquidation authority.

⁴⁹5 U.S.C. § 552.

⁵⁰Pub. L. No. 111-203, § 112(d)(5), 124 Stat. 1397.

FSOC Generally Followed
Similar Processes for Rules
That Required Limited
Regulatory Analysis

FSOC issued a rule setting out the procedures for requesting access to information contained in its records.

According to Treasury officials and staff, FSOC's rulemaking authority is narrow compared to that of the member agencies. The Dodd-Frank Act requires that those agencies issue a large number of rules, while it assigns few authorities to FSOC that may lead to rulemakings. Although FSOC does not have extensive rulemaking authority or written policies and procedures, its rulemakings followed a general process. For each rule, FSOC published a notice of proposed rulemaking in the Federal Register before issuing a final rule and included a time period for public comments (see table 1). Treasury staff noted that FSOC was not required to issue the various rulemakings but went through this process to provide greater public transparency of its processes. According to FSOC and Treasury officials, officials and staff from Treasury's Office of General Counsel led the rule-drafting process, with officials and staff from Treasury's Office of Domestic Finance, including the FSOC policy staff, and members' staffs contributing significantly to the drafting of the designations rules. The processes relied on various groups and mechanisms to get feedback from officials and FSOC members' staffs including standing committees and ad hoc working groups. The Deputies Committee was briefed regularly throughout the process, especially on issues that could not be resolved in other committees or working groups. Deputies kept their respective FSOC members informed throughout the rulemakings, and the members received all of the rule-making notices and final rules at least 48 hours before they were to be voted on at FSOC meetings. FSOC members voted unanimously to issue all of the rule-making notices and final rules before they were published in the Federal Register.

Table 1: FSOC Rules Issued between July 21, 2010 and July 20, 2012

Title	Issuance date	Due date for comments	Number of comments	Effective date
Authority to Designate Financial Market Utilities as Systemically Important

Final rule	April 11, 2012	n/a	N/A	May 11, 2012

Source: GAO summary of information from the Federal Register.

Note: n/a stands for not applicable.

Although the process for the rulemakings followed a general pattern, the number of notices, the time between the initial notice and the final rule, and the number of comments varied considerably across rules. Generally, these differences reflected differences in priorities and the potential impact of each rule. For example, FSOC and some member agency officials attributed the longer lapse between receiving comments on the notice for implementing FOIA and issuing the final rule to the relatively low priority attached to completing this rule. Officials told us that the rule remained a relatively low priority because FSOC had not yet begun gathering information under the FMU and nonbank financial company designation rules. In contrast, the long gap between the receipt of comments on the first notice of proposed rulemaking for the nonbank financial company rule and the issuance of the final rule reflects the complexities of developing a rule that encompasses a broad range of industry segments and the potential impact on them.

During the gap between the first and second notices of proposed rulemaking for designating nonbank financial companies, FSOC and OFR staff developed information to support a set of thresholds for determining which nonbank financial companies would pass from the first stage of the designation process to the second. The thresholds, which were included in the interpretive guidance that accompanies the second notice, use

publicly available information so that the first stage would be transparent. Financial companies have to meet a size threshold of \$50 billion in assets and one of five other thresholds, including measures of leverage and debt. The thresholds generally reflect staff calculations. Staff generally calculated thresholds by placing the threshold at an interval above the mean that considers the dispersion of the data from the mean. Staff also tested to see whether certain companies that experienced material distress during the 2007-2009 financial crisis would have been captured by the threshold. The data used were generally either data on the 19 largest bank holding companies or nonbank financial companies in 2007 and 2008.

FSOC is subject to laws and executive orders that require certain regulatory analyses as part of its rule-making processes. These include the Paperwork Reduction Act and the Regulatory Flexibility Act, as well as Executive Orders 12866 and 13563 (Executive Orders). Among other things, the Paperwork Reduction Act requires agencies to justify any collection of information from the public and to estimate the time and expense required to comply with the paperwork requirements in the rule. The Regulatory Flexibility Act requires federal agencies to assess the impact of their regulation on small entities and consider regulatory alternatives to lessen any regulatory burden. The Executive Orders require FSOC to assess the economic effects of economically significant rules, including the quantitative and qualitative benefits and costs of those regulations.⁵¹

However, FSOC was required to consider costs and benefits only as they relate to the Paperwork Reduction Act for the FMU and nonbank financial company rulemakings. As a result, these rules contain estimates of the time needed to comply with paperwork requirements. FSOC estimates the annual reporting burden for the FMU rule at 500 hours and for the nonbank financial company rule at 1,000 hours. The FMU rule does not include an estimate of the cost of the projected hours; the cost for the hours imposed by the nonbank financial company rule is estimated at \$450,000 a year. FSOC concluded that small entities were unlikely to be

⁵¹A regulatory action is determined to be “economically significant” if the Office of Management and Budget determines that it is likely to have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities.

FSOC Has Not Set up
Processes to Assess Whether
Designating FMUs and
Nonbank Financial Companies
Will Have the Intended Impact

designated as posing a risk to U.S. financial stability, and thus an analysis of the rules designating FMU and nonbank financial companies' impact on small entities was not required. In addition, FSOC did not conduct a benefit-cost analysis for the rules designating FMUs or nonbank financial companies because the Office of Management and Budget determined that these rules were not economically significant. Treasury officials noted that the rule did not impose substantive requirements on specific entities, but only laid out the process by which they could become subject to other rules and regulations. In addition, FSOC member staff noted that costs and benefits of the designation were not among the factors that the Dodd-Frank Act directs FSOC to consider when making a designation.

Designating FMUs and nonbank financial companies was intended to address certain risks to financial stability posed by these entities. The designations, however, have the potential to confer certain benefits and costs on the wider economy and individual entities being designated. Examples of potential benefits and costs of subjecting FMUs and nonbank financial companies to heightened supervision include the following:

Economy-wide benefits. The Dodd-Frank Act provides FSOC with the authority to designate nonbank financial companies because Congress believed that these companies could threaten U.S. financial stability. Subjecting companies to enhanced supervision may contribute to financial stability.

Individual benefits. Some research has shown that certain large, interconnected financial institutions considered too big to fail may have higher credit rating agency ratings and lower borrowing costs than would otherwise be warranted. As a result, designated nonbank financial companies that are not already treated as too big to fail by rating agencies or markets could see their borrowing costs fall.⁵²

Economy-wide costs. Industry representatives have noted that regulations such as minimum capital requirements that may be

⁵²Expert opinions differ on whether certain provisions in title II of the Dodd-Frank Act will lessen any cost advantage certain institutions have enjoyed.

imposed on designated entities have the potential to reduce the availability of credit and slow economic growth.

Individual costs. Some of those who commented on the nonbank financial company rule noted that being designated would impose a significant regulatory burden on the designated companies. Designated nonbank financial companies will be subject to supervision similar to that for large bank holding companies, required to prepare resolution plans, and assessed fees to fund the operation of OFR and FSOC. However, the impact of these Dodd-Frank Act provisions on designated nonbank financial companies will not be known until the rules are applied. Designated FMUs could also experience increased costs.

The Dodd-Frank Act requires FSOC to rescind any designation if the institution no longer meets the FMU or nonbank financial company standards and specifically requires FSOC to reevaluate nonbank financial company designations at least annually. The final rule for designating certain nonbank financial companies for enhanced supervision says FSOC will notify a nonbank financial company prior to an annual reevaluation and provide the company up for review with an opportunity to submit written materials to contest the designation. However, the rule also notes that reevaluations will focus on material changes since a previous review rather than a full replication of the original designation process. In the interpretive guidance for the nonbank financial company designations, FSOC says that it also intends to review the appropriateness of both the stage one thresholds and the levels of the thresholds that are specified in dollars as needed, but at least every five years, and to adjust the thresholds and levels as it may deem advisable. However, FSOC has not set up processes to conduct a comprehensive assessment of the overall impact of designations.

Doing a comprehensive analysis to assess whether designations are having their intended impact of providing greater financial stability and the extent of any other impacts will be challenging. Namely, establishing a baseline from which to evaluate the overall impact of various rules will likely be complex because the impact of being designated will depend on the application of a number of rules being written by multiple independent

regulatory agencies and issued over a span of time.⁵³ For example, rules the CFTC, Federal Reserve, and SEC are writing will help determine the impact of being designated a systemically important FMU. Similarly, the impact of being designated a nonbank financial company will be influenced by the rule the Federal Reserve is writing, to implement enhanced prudential standards; the Federal Reserve and FDIC rule on resolution planning; and Treasury's rule on assessments to fund FSOC and OFR. Moreover, not all of these agencies are required to conduct cost-benefit analyses that might be useful in establishing a baseline for ongoing evaluation. For example, neither the Federal Reserve nor FDIC are subject to the Executive Orders that require an economic analysis of the costs and benefits of certain rules. Furthermore, while some regulatory agencies may conduct periodic retrospective reviews of their rules, these reviews tend to focus only on the rules issued by their agency.

FSOC is uniquely positioned to address this challenge. FSOC is responsible for designating FMUs and nonbank financial companies, and its member agencies are responsible for writing the rules that will impact these designated entities. Moreover, FSOC can rely on OFR for some data collection and analysis. However, FSOC members would need to collaborate on such an assessment, because FSOC policy and OFR staff, who are Treasury employees, may not have access to all of the needed information. In addition, collaboration is needed because, according to Treasury officials, it would be inappropriate for FSOC staff to review rules drafted by independent agencies unless those agencies agreed to participate in the comprehensive assessment. Without such an assessment, decision makers may not have the information they will need to determine whether designating new entities for enhanced supervision and other requirements and restrictions is addressing a perceived gap in the regulatory system and improving the stability of the financial system or whether policy changes should be considered.

⁵³In [GAO-12-151](#) we note the importance of setting up baselines early to support later retrospective reviews of individual rules. In addition, we reported that in light of its various statutory requirements, FSOC plans to assess the future impact of significant Dodd-Frank rules. Given these plans, we previously recommended that FSOC direct OFR to begin collecting the necessary data to carry out these analyses.

FSOC Has Issued Mandated Reports, but Does Not Have Sufficient Processes for Identifying or Prioritizing Emerging Threats

As table 2 shows, the Dodd-Frank Act mandated that FSOC issue a number of reports, including five one-time studies and ongoing annual reports.⁵⁴ Although some of the timelines were short—two of the studies had to be issued in 6 months—and the subject matter difficult, FSOC met all of its mandated report timelines and generally strove to address the specific items in the mandate. For example, the mandated studies generally began with a discussion of the mandate itself and the extent to which the report could address certain questions. The 2011 Annual Report also generally addressed the subjects in the mandate, including identifying emerging threats to financial stability of the nation and recommendations to enhance the integrity, efficiency, competitiveness, and stability of U.S. financial markets; promote market discipline; and maintain investor confidence.

Table 2: Reports Mandated by the Dodd-Frank Act and Issued by FSOC from July 21, 2010 to July 20, 2012

Report title	Issuance date	Number of public comments	Number of recommendations
Studies			
Study & Recommendations on Prohibitions on Proprietary Trading & Certain Relationships with Hedge Funds & Private Equity Funds	January 2011	8,000 ^a	10
Study & Recommendations Regarding Concentration Limits on Large Financial Companies	January 2011	6	3
Report to the Congress on Secured Creditor Haircuts	July 2011	n/a	0
Report to the Congress on Prompt Corrective Action	December 2011	n/a	0
Report to Congress on Study of a Contingent Capital Requirement for Certain Nonbank Financial Companies and Bank Holding Companies	July 2012	n/a	1
Annual reports			
FSOC 2011 Annual Report	July 2011	n/a	14
FSOC 2012 Annual Report	July 2012	n/a	29

Source: GAO summary of information from FSOC.

Note: n/a stands for not applicable.

^aThis number includes 6,550 similar letters that FSOC describes as essentially the same letter with different signatures.

⁵⁴The Dodd-Frank Act also mandated that the FSOC Chairperson report on the macroeconomic effects of risk retention requirements and the effects of the size and complexity of financial institutions on capital market efficiency and economic growth by January 2011. The National Credit Union Authority Clarification Act required FSOC to report on actions taken in response to a mandated study by GAO on the National Credit Union Administration's supervision of corporate credit unions and implementation of prompt corrective action. The report was issued in June 2012.

The processes that FSOC used to issue all of the reports were generally similar to those used for rulemakings. Treasury officials led activities related to issuing the studies, except that the Federal Reserve staff led activities for and was the author of the study on concentration limits. For the annual reports, FSOC brought on detailees from Federal Reserve District Banks to lead the process. For all of the reports, the process relied on ad hoc working groups of member staff to provide input. FSOC also relied on the Deputies Committee to help manage the process and keep FSOC members informed of key decisions. The members voted unanimously to issue all of the reports.

FSOC's annual reporting process is an ongoing responsibility which, in the absence of a strategic plan, functions as its major strategic planning document and method for communicating with Congress and the public, especially regarding potential emerging threats to U.S. financial stability. FSOC's early annual reports provide extensive information about the current economy and complex issues, such as high-frequency trading and the MF Global bankruptcy. In addition, the reports provide extensive discussions of current known threats such as those associated with money market funds and the European sovereign-debt crisis and makes some recommendations to address them. However, FSOC has not developed a structure that supports having a systematic or comprehensive process for identifying potential emerging threats. The process for identifying these threats is similar, in some ways, to that used by the Systemic Risk Committee. Members' staffs, including some members of the Systemic Risk Committee, identify specific threats for consideration. As a result, new threats that members or staff have not already identified may not be included.

In addition, the lack of a systematic process for identifying potential emerging threats leads to potential inconsistencies in identifying such threats. For instance, certain potential threats related to U.S. debt, are not in the 2011 Annual Report. Instead this report has a conflicting message on the danger the U.S. debt poses to financial stability.⁵⁵ The project leader of the 2011 Annual Report said that the report did not include the

⁵⁵The Executive Summary of FSOC's 2011 Annual Report acknowledges that there is a long run imbalance in the U.S. budget and that a solution to that imbalance is crucial to U.S. financial stability. However, the body of the report says that the current pricing of U.S. debt implies that markets assume that a solution to the long-term imbalance will be found, and the issue is not included as an emerging threat.

U.S. debt as an emerging threat because of issues of balance and the inappropriateness of FSOC speculating on the credit risk associated with U.S. Treasury securities. However, the 2012 Annual Report identifies the U.S. debt as a potential threat, but does not explain what has changed since the 2011 report.⁵⁶ Similarly, the 2011 report includes several threats associated with possible unintended consequences of new regulations being written to implement the Dodd-Frank Act, but the 2012 report does not include these threats. The 2012 report does include a framework for identifying potential emerging threats, but, this framework, which separates threats into shocks to the system and vulnerabilities in the system that would exacerbate shocks, is not equivalent to the kind of systematic analysis that would help determine both the likelihood of a threat and its likely severity. Without a systematic process that consistently identifies threats Congress and the public might believe that a threat has grown in importance or been addressed when that is not the case.

Similarly, neither the 2011 or 2012 annual reports use a systematic forward-looking approach to identify potentially emerging threats. As a result, they comingle threats that emerged during the 2007-2009 crisis, current threats, and potentially emerging threats. Although the 2012 report notes that structural vulnerabilities that contributed to the 2007-2009 financial crisis associated with mortgage-backed securities backed by subprime mortgage debt built up over an 8-year period, the report does not use a systematic mechanism for identifying similar kinds of asset build-ups or other market changes that might signal a potential emerging threat. Rather the report often identifies risks, such as those associated with the European sovereign-debt crisis or money market funds, which are ongoing or have previously been identified, although it acknowledges that these events may change in the future in ways that are not currently known. The 2012 report does include at least one area that could be considered potentially emerging—threats associated with having a low interest rate environment. Specifically it notes threats associated with market participants taking on more risk to increase their

⁵⁶FSOC's 2012 Annual Report notes that there are both short-term and longer-term risks associated with the U.S. fiscal situation saying that the situation represents a source of uncertainty for financial markets and the real economy. OFR's 2012 Annual Report identifies the U.S. fiscal situation as a concern noting that the risk of a sharp change in the demand for U.S. Treasury securities potentially threatens U.S. financial stability. Both reports continue to note that in the short run yields on U.S. debt are very low.

earnings but says it does not see evidence of this now. Threats that emerged during the crisis or those that are currently evident likely require different and perhaps more immediate responses than those that are potentially emerging. The comingling of well-known risks with risks that are developing, but less well-known, reduces the ability of policymakers and market participants to develop effective and timely responses for the latter.

Further, the FSOC process for identifying threats limits its ability to explicitly prioritize the large number of threats identified. The 2011 report includes over 30 threats without explicitly specifying which are most important. The 2012 report also includes a lengthy list of threats without explicit prioritization. In contrast, other entities, such as the International Monetary Fund and European Central Bank, issue reports that explicitly prioritize potentially significant threats. Treasury and FSOC officials and staff noted that FSOC's Annual Reports have a different purpose and implicitly prioritize the threats in the recommendations sections of the reports. For example, they noted that the recommendation for money market funds—a threat included in the potentially emerging section—notes that the vulnerabilities associated with money market funds are a particular focus of FSOC. They contrasted this recommendation with other recommendations, such as those related to the low interest rate environment that notes that regulators and industry should adopt certain practices to help monitor the situation. However, the lack of a systematic process that explicitly prioritizes potential emerging threats leaves policymakers without the information they need to focus on or allocate scarce resources to the most important threats.

Conclusions

The 2007-2009 financial crisis highlighted how the nation's fragmented regulatory structure was not equipped to monitor and address risks across the financial system, nor did it have the needed information to facilitate that oversight. To address this weakness, Congress created FSOC and OFR to improve the U.S. government's ability to identify and respond to future threats to financial stability. This is a daunting task, and one that is made more challenging as FSOC and OFR must concurrently stand-up organizations and establish a sense of collective accountability among the independent regulators and other members.

Successfully implementing their mandates will require FSOC members to actively work together and with external stakeholders. Appropriate accountability and transparency mechanisms also need to be established to determine whether FSOC and OFR are effective and to ensure that the

public and Congress have sufficient information to hold the entities accountable for results. Over the last 2 years, FSOC and OFR have made progress on these fronts. Staff from FSOC member agencies told us that the level of collaboration and communication among the agencies has increased since the creation of FSOC and that such collaboration has resulted in more information sharing and diverse perspectives being considered. OFR has also made contributions to international efforts, such as coordinating U.S. input on the Legal Entity Identifier, to enhance governments' abilities to track financial activity.

While FSOC and OFR have made some progress, continued efforts to improve the entities' accountability, transparency, and collaboration are needed. As we have seen, for example:

- OFR issued a strategic framework in March 2012 that covered the period fiscal years 2012-2014. This represented an important step for the new agency in adopting leading practices in performance management. The framework identifies OFR's strategic goals, highlights a number of objectives under those goals, and lays out implementation priorities for the first year covered by the document. However, as OFR acknowledges, the framework does not include key elements of a performance management system, such as linking programmatic, human resources, and budgetary decision making to its strategic goals and developing performance measures. OFR expects to communicate progress on these key elements when it provides a new human resources plan to Congress in September 2012 and in its fiscal year 2014 budget submission. Moving forward, transforming its framework into a comprehensive strategic planning and performance management system can provide the agency with a long-term vision and allow others to hold it accountable which will be critical for OFR.
- The critical role of monitoring threats to financial stability and responding to emerging threats also needs to be further developed. Potential threats to financial stability are discussed at FSOC meetings and FSOC has established a Systemic Risk Committee to facilitate coordination among members' staffs, including member agencies that often have their own groups devoted to risk analysis. In addition, OFR is evaluating a variety of potential tools for assessing financial stability and studying methods to improve stress tests. Collectively, these efforts remain incomplete. The approach of the Systemic Risk Committee can help FSOC analyze known risks but does not take full advantage of FSOC member agency resources to identify new threats

to the financial system. Without more systematic and comprehensive mechanisms, including comprehensive sharing of key financial risk indicators, risks to financial stability may develop in the system without being recognized.

- FSOC and OFR have attempted to be transparent with some of their decision making and activities. FSOC, for instance, posts the minutes from its meetings and other key documents on Treasury's website, and it provided insight into its designations processes through multiple rulemakings and comment periods as well as by providing additional information on the designation of FMUs in its 2012 Annual Report. OFR also posted some information on Treasury's website and provided information on a wide range of OFR activities and research in its first annual report issued in July 2012. As we found, however, both FSOC and OFR could be more transparent. For example, FSOC's minutes contain limited details about the council's discussion and the amount of detail included in the minutes has declined over time. While some information discussed must remain confidential given potential market sensitivities, legal restrictions on sharing certain information, and the need for members to deliberate, striving to be as transparent as possible given the potential impact of some of its decisions on institutions and markets is important for FSOC. FSOC's and OFR's limited transparency has caused some former government officials, industry representatives, and academics to question whether they are making progress. Continued efforts to increase transparency will allow the public and Congress to better understand FSOC's and OFR's decision making, activities, and progress.
- FSOC and OFR have taken some steps to encourage collaboration, such as FSOC setting up standing committees composed of members' staffs and OFR beginning to establish a professional and technical advisory committee. However, more needs to be done to promote collaboration—both among FSOC members and between FSOC and external stakeholders. For example, FSOC has not yet set up advisory committees, and OFR and FSOC have not yet clarified their responsibility for implementing statutory requirements for monitoring and reporting on threats to U.S. financial stability, including the responsibilities of member agencies. More fully incorporating the key practices for successful collaboration, including agreeing on roles and responsibilities and establishing reinforcing or joint strategies, could make FSOC's and OFR's existing collaboration efforts more effective. Effective collaboration could eliminate unnecessary duplication for both the industry and regulators. In addition, it could

help to fill regulatory gaps so that risks would not migrate to unregulated markets or countries as they did prior to the 2007-2009 financial crisis.

- One of FSOC's most significant actions, to date, has been finalizing its rules for designating FMUs and nonbank financial companies for additional oversight. The Congress intended that the enhanced supervision of those entities designated would lead to greater financial stability. In addition, the designations will likely have other important ramifications for the designated entities—which will become subject to a number of other rules and regulations—and potentially the nation's economy. While FSOC must periodically reevaluate the nonbank financial company designations and intends to review the thresholds for stage one of the nonbank financial company process at least every 5 years, it is not required to conduct a comprehensive assessment to determine whether the designations are having their intended impact of improved financial stability as well as other consequences. Establishing a baseline and developing a framework to comprehensively assess the impact of the designations will be difficult because of the number of independent regulators involved. But, without such an analysis, Congress, the affected institutions, the public, and FSOC cannot determine whether the designations and associated oversight is actually helping to improve financial stability.
- While FSOC's annual reports identify a number of potential emerging threats to the nation's financial stability, they do not use a systematic forward-looking approach to identify such threats. Thus, some threats may not be identified consistently or at all. Threats such as those associated with the long term U.S. debt appear in FSOC's 2012 Annual Report but had not appeared in FSOC's 2011 Annual Report and there was no explanation for the change. The reports are also not forward-looking in that many of the identified threats, such as those associated with money market funds or the European debt crisis, will not potentially emerge but rather emerged during the 2007-2009 financial crisis or more recently. Finally, the reports do not explicitly prioritize the emerging threats relying instead on a careful reading of the recommendations to determine which are critical. In addition, these recommendations do not consistently identify which member agency or agencies are recommended for implementing or monitoring the council's recommendations. The lack of this information makes determining which well-recognized threats require immediate action, which potential emerging threats are most likely to have severe outcomes, and how best for decision makers to address the differing threats. Finally, it does not allow Congress to hold FSOC accountable

for identifying potential emerging threats or implementing the recommendations.

Whether FSOC and OFR fundamentally change the way the federal government monitors threats to financial stability remains an open question. This is due, in part, to the newness of the entities, as both continue to develop needed management structures. But limits to FSOC's and OFR's transparency also contribute to questions about their effectiveness. Addressing the issues we have identified will help FSOC and OFR shed more light on their decision making and activities and allow Congress to hold them accountable for results. Moreover, addressing these issues can help FSOC and OFR to further promote collaboration among FSOC's members and with external stakeholders, which is critical to their ability to achieve their missions. If they do not succeed in achieving their missions the financial system will remain vulnerable to large or multiple shocks that could result in large losses in asset values, higher unemployment, and slower economic growth associated with previous financial crises.

Recommendations for Executive Action

While FSOC and OFR have made progress in establishing their operations and approaches for monitoring threats to financial stability, developing accountability and transparency mechanisms, and enhancing collaboration among the financial regulatory agencies, these efforts could be strengthened. Therefore, we are recommending that the Secretary of the Treasury take 10 actions—some in his capacity as the Chairperson of FSOC, in consultation with FSOC members, and in his leadership role for OFR, which does not yet have a confirmed director.

We recommend that FSOC and OFR clarify responsibility for implementing requirements to monitor threats to financial stability across FSOC and OFR, including FSOC members and member agencies, to better ensure that the monitoring and analysis of the financial system are comprehensive and not unnecessarily duplicative.

As FSOC continues to develop approaches for monitoring threats to financial stability, we recommend that FSOC develop an approach that includes systematic sharing of key financial risk indicators across FSOC members and member agencies to assist in identifying potential threats for further monitoring or analysis.

To improve the transparency of FSOC and OFR operations, we recommend that FSOC and OFR each develop a communication strategy

to improve communications with the public. The strategy could include using technology more effectively to communicate, such as having fully developed websites, sending regular notices to interested parties, and developing methods to communicate with the public.

To support the growth of OFR into a viable and sustainable entity, we recommend that OFR build on its strategic framework by further developing its strategic planning and performance management system so that it links its activities to its goals and uses publicly available performance measures to measure its progress.

To strengthen accountability and collaboration in FSOC's decision making, we recommend that FSOC take the following six actions:

- Keep detailed records (for example, detailed minutes or transcripts) of closed door sessions of principals meetings and to the extent possible make them publicly available after an amount of time has passed sufficient to avoid the release of market-sensitive information or information that would limit deliberations.
- Establish formal collaboration and coordination policies that clarify issues such as when collaboration or coordination should occur and what role FSOC should play in facilitating that coordination.
- More fully incorporate key practices for successful collaboration that we have previously identified. Internally, this could include working with agencies to rationalize schedules for rulemakings and conducting collaborative system-wide stress testing. Externally, this could include using professional and technical advisors including state regulators, industry experts, and academics.
- Establish a collaborative and comprehensive framework for assessing the impact of its decisions for designating FMUs and nonbank financial companies on the wider economy and those entities. This framework should include assessing the effects of subjecting designated FMUs and nonbank financial companies to new regulatory standards, requirements, and restrictions; establishing a baseline from which to measure the effects; and documenting the approach.
- Develop more systematic forward-looking approaches for reporting on potential emerging threats to financial stability in annual reports. Such an approach should provide methodological insight into why certain threats to financial stability are included or excluded over time,

separate current or past threats from those that are potentially emerging, and prioritize the latter.

- Make recommendations in the annual report more specific by identifying which FSOC member agency or agencies, as appropriate, are recommended to monitor or implement such actions within specified time frames.

Agency Comments and Our Evaluation

We provided a draft of this report to the Secretary of the Treasury—as the Chairperson of FSOC and in his leadership role for OFR—for review and comment. Treasury’s Under Secretary for Domestic Finance, on behalf of the Chairperson of FSOC, provided written comments, which are reprinted in appendix III. Treasury also provided technical comments on the draft report, which we incorporated as appropriate. Treasury solicited views from staff of the FSOC members and member agencies on the draft report and reflected these views in the comments provided to us.

In their written comments, Treasury emphasizes the progress that FSOC and OFR have made since their creation. For example, Treasury highlights FSOC’s work in issuing a final rule and guidance relating to the designation of nonbank financial companies for enhanced supervision and designating eight systemically important FMUs that will be subject to enhanced risk management standards. Treasury also highlights OFR’s progress in building its organization and analytical capabilities, including the launch of OFR’s working paper and seminar series for research on financial stability and risk management. Treasury also outlines efforts FSOC and OFR have taken to promote transparency and accountability, including testifying before Congress, responding to requests for information from oversight bodies, conducting voluntary rulemakings, or making information available on websites. In addition, Treasury also emphasizes that the progress that each entity has made to date should be viewed with the understanding that both entities are relatively new. Nevertheless, Treasury recognizes that more work remains. In the report, we also describe FSOC’s and OFR’s efforts, to date, in fulfilling their statutory responsibilities and efforts to promote accountability and transparency. The report also notes that both entities were established in 2010.

In its letter, Treasury states that officials will carefully consider the report’s findings and recommendations. Treasury further notes that the Secretary, in his role as Chairperson, will share the recommendations with the Council for their review and consideration. Treasury also offers initial

reactions to several of our recommendations. First, regarding our recommendation that FSOC and OFR should clarify their responsibilities for monitoring threats to financial stability, Treasury states that there is no existing confusion or overlap of responsibilities. Furthermore, Treasury states that both organizations are working together to pursue their distinct, but complementary, statutory missions, and cites OFR's efforts to develop the Financial Stability Monitor, a collection of indicators related to financial stability that Treasury expects will be shared with FSOC members. In the report, we point out that Congress gave both FSOC and OFR responsibilities for monitoring systemic risk—responsibilities that both entities must fulfill. We also highlight that multiple FSOC members, such as the Federal Reserve, also have ongoing efforts to monitor threats to financial stability. The report does not suggest that any overlap between these efforts currently exist. Rather, the report recommends that these similar statutory responsibilities and ongoing efforts should be clarified and carefully coordinated. While Treasury notes that no confusion or overlap currently exists, our past work has shown that without clearly delineating and coordinating roles and responsibilities there can be duplication of efforts, confusion, and regulatory gaps. In addition, the report notes the importance of a systematic and comprehensive approach to identifying threats to financial stability. While OFR's Financial Stability Monitor could be a vehicle for sharing key financial risk indicators, it does not yet reflect a comprehensive interagency effort to collect and share indicators related to financial stability.

Second, Treasury states that it expects FSOC will consider the effects on the financial system resulting from designation in its periodic assessments in response to our recommendation that FSOC develop a framework for assessing the impact of its decisions for designating FMUs and nonbank financial companies on the wider economy and those entities. The Dodd-Frank Act requires FSOC to periodically review the designation of nonbank financial companies, and FSOC intends to periodically review FMU designations. However, FSOC is not currently required to examine the potential economic impact of the designations. In our report, we detail the types of benefits and costs that individually designated firms, as well as the economy at large, may experience as a result of the designations. Given the potential magnitude of these benefits and costs of the designations, a comprehensive assessment of their impact is warranted.

Third, Treasury agrees that OFR should implement a robust strategic planning and performance management system as the office grows.

Treasury describes OFR's past and ongoing efforts on this front, highlighting, for example, OFR's March 2012 strategic framework. In the report, we note that the strategic framework was an important first step for OFR, and we also describe OFR's efforts to develop an independent strategic planning and performance system, including performance measures, and time lines for publicly releasing this information. We acknowledge OFR's efforts in continuing to develop the elements required for a strategic plan and performance management system and will review this information when it is publicly released.

Finally, Treasury notes our recommendation regarding OFR's communications strategy is consistent with the office's ongoing efforts. The letter describes OFR's efforts to improve communication and notes that FSOC's website is being redesigned to improve usability and navigation. The report also recognizes OFR's recent efforts to improve their communication methods, such as the recent capability OFR added to its website enabling the public to sign up for email alerts on recent OFR activities.

As agreed with your office, unless you publicly announce the contents of this report earlier, we plan no further distribution until 30 days from the report date. At that time, we will send copies of this report to interested congressional committees and members, the Secretary of the Treasury, and other members of FSOC. The report also is available at no charge on the GAO website at <http://www.gao.gov>.

If you or your staffs have any questions about this report, please contact A. Nicole Clowers at (202) 512-8678 or clowersa@gao.gov. Contact points for our Offices of Congressional Relations and Public Affairs may be found on the last page of this report. GAO staff who made major contributions to this report are listed in appendix IV.

Director
Financial Markets and Community Investment

Appendix I: Objectives, Scope, and Methodology

The objectives of this report are to examine the Financial Stability Oversight Council's (FSOC) and Office of Financial Research's (OFR) (1) challenges in fulfilling their missions; (2) efforts in establishing management structures and mechanisms to carry out their missions and attain their goals; and (3) activities for supporting collaboration among members and external stakeholders, including international bodies and regulators; as well as (4) FSOC's processes used to issue rules and reports.

To identify and examine any challenges faced by FSOC and OFR, we reviewed our prior reports on regulatory reform and the financial crisis. We also reviewed statements of government officials, members of Congress, and academic experts. In addition, we interviewed FSOC policy staff and support staff of FSOC members, including staff and officials at member regulatory agencies. At OFR, we interviewed senior officials and some staff members.

To examine FSOC's and OFR's efforts in establishing management structures and mechanisms to carry out their missions, we reviewed the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), FSOC's bylaws and organizational structure (including its committee structure), and OFR's strategic framework. We reviewed minutes from FSOC's principals' meetings (i.e., the meetings with the designated FSOC members, many of whom are heads of regulatory agencies), and we reviewed the minutes from the Federal Reserve's Federal Open Markets Committee and the United Kingdom Interim Policy Committee meetings for comparison purposes. We also examined the entities' fiscal years 2012 and 2013 budget requests, budgetary and staffing data, and congressional testimonies. We assessed the reliability of OFR's staffing data by comparing the data provided with information contained in the President's budget for fiscal year 2013 and FSOC testimony in April 2011. We also tested the data for consistency over time. We determined the data were sufficiently reliable for our purposes. To understand the steps OFR is taking to protect the sensitive data it collects, we interviewed OFR officials with knowledge of data security efforts, reviewed the OFR strategic framework, and reviewed Congressional testimony provided by OFR. In addition, we reviewed the Department of the Treasury Inspector General reports on the stand-up of OFR and the Consumer Financial Protection Bureau. We used criteria from *Standards for Internal Control in the Federal Government*, our past work on the stand-up of federal entities, such as the Millennium Challenge Corporation, and managing for results to evaluate FSOC and OFR management structures and mechanisms, including their need for

strategic planning and performance measures. We reviewed selected academic literature on tools used or proposed to identify potential threats to financial stability by entities that write financial stability reports, including the European Central Bank, Bank of England, and International Monetary Fund, and others, including the Institute for International Finance and Pew Financial Reform Project. We also attended FSOC's and OFR's December 2011 conference entitled *Macroprudential Toolkit: Measurement and Analysis*. We interviewed some FSOC members; officials from FSOC federal regulatory agencies whose heads are members of FSOC (member agencies); support staff of other FSOC members; FSOC, OFR, and other Treasury officials and staff; and academics who have published research related to systemic risk and worked on financial stability reports.¹ We also coordinated with the Treasury Office of Inspector General and the Council of Inspectors General on Financial Oversight regarding their ongoing audits of FSOC and OFR.

To determine how FSOC and OFR support collaboration, we reviewed our criteria for effective collaboration and compared it to FSOC and OFR policies and practices. We analyzed the Dodd-Frank Act requirements for collaboration, FSOC's transparency policy, hearing procedures, Dodd-Frank Act integrated implementation roadmap, and memorandum of understanding on information sharing. We also reviewed FSOC's products, such as the 2011 Annual Report, and interviewed FSOC staff and officials from FSOC member agencies and some FSOC member support staff to determine how FSOC members collaborate, including how they participate in the drafting of the products. To determine how collaboration practices among and between domestic and international financial regulators have changed since the creation of FSOC, we reviewed FSOC, OFR, and some member agencies' congressional testimony and reports from international bodies, such as the Financial Stability Board. Finally, we interviewed representatives from industry trade groups, government officials in the United Kingdom, and experts

¹Along with their FSOC support staff, we interviewed the Independent Member with Insurance Expertise, the State Insurance Commissioner, and the State Securities Commissioner. We also interviewed the Conference of State Banking Supervisors staff supporting the State Banking Supervisor member, but not the member himself. For those members who are heads of federal agencies, we generally held interviews with senior agency officials, but not with the FSOC principal member. We did not interview anyone at the Federal Insurance Office but did provide them with an opportunity to provide their views and arrange an interview, if needed.

from the European Union. We selected individuals from the United Kingdom and European Union because those entities have experience working with U.S. federal financial regulators and councils designed to enhance financial stability.

To examine the process and procedures FSOC and OFR used in issuing products, we analyzed FSOC rules or reports issued before July 2012 including FSOC's 2011 and 2012 Annual Reports. We analyzed the content of public comments on three proposed rules to examine how FSOC addressed them in the final rules. We also reviewed documentation on the process FSOC staff used to document and address comments from member agencies on the 2011 Annual Report. In addition, we examined the analyses and other materials provided to FSOC members prior to their meetings, including material to be presented at the meetings dating from October 2010 through December 2011 and selected documents thereafter through March 2012. We interviewed officials from FSOC member agencies, FSOC and OFR policy staff who had responsibility for contributing to the products within our scope, academics who have published research related to systemic risk, and industry or trade groups who submitted comments on a number of FSOC rules and reports. Finally, using testimonial and documentary evidence, we compared FSOC's rulemaking process, rules, and reports with key practices identified in our prior work on rulemaking and standard economic practice, where applicable.²

We conducted this performance audit from November 2011 to September 2012 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

Appendix II: Standing Committees of the Financial Stability Oversight Council

FSOC has established seven standing committees. The committees and brief descriptions are listed below.

- *Deputies Committee*: Coordinates and oversees the work of the interagency staff committees. The members of the Deputies Committee are senior officials from each of the member agencies. Treasury chairs this committee.
- *Systemic Risk Committee*: Includes senior staff and reports to the Deputies Committee. The committee is accountable for systemic risk monitoring and will play a role in prioritizing the review of sources of systemic risk and guiding the work of staff and the systemic risk subcommittees. Treasury chairs this committee. It has two subcommittees.
 - *Institutions Subcommittee*: Focuses on identifying and analyzing issues that affect financial institutions in the medium and longer term. It also attempts to identify structural issues within financial institutions that could threaten financial stability, such as trends in leverage or funding structure, new products, or exposures to particular risks. The Board of Governors of the Federal Reserve (Federal Reserve) and the Federal Deposit Insurance Corporation (FDIC) chair this subcommittee.
 - *Markets Subcommittee*: This subcommittee focuses on identifying and analyzing issues that affect financial markets in the medium and longer term, including structural issues within financial markets that could threaten financial stability, such as trends in volatility or liquidity, market structure, or asset valuations. The Commodity Futures Trading Commission (CFTC) and Securities and Exchange Commission (SEC) chair this committee.
- *Designation of Nonbank Financial Companies Committee*: Supports FSOC in considering, making, and reviewing designations of nonbank financial companies to be supervised by the Federal Reserve. The Federal Reserve and FDIC chair this committee.
- *Designation of Financial Market Utilities Committee*: Supports FSOC in considering, making, and reviewing designations of financial market utilities and payment, clearing, and settlement activities. The Federal Reserve, SEC, and CFTC chair this committee.
- *Heightened Prudential Standards Committee*: Supports FSOC in making recommendations for heightened prudential standards with

respect to designated nonbank financial companies and large, interconnected bank holding companies, and with respect to other financial activities and practices that could impact financial stability. This committee also supports FSOC's authorities for monitoring regulatory developments, facilitating information sharing, recommending supervisory priorities and principles, and identifying gaps in regulation that could pose risks. The Federal Reserve and the Office of the Comptroller of the Currency chair this committee.

- *Orderly Liquidation Committee*: Supports any FSOC recommendations on resolution plan requirements, consideration of filed resolution plans, and consideration of FDIC and Federal Reserve proposed orders to require divestiture; and consults with FSOC on rulemakings to implement the Title II orderly liquidation authority. FDIC and Treasury chair this committee.
- *Data Committee*: Supports FSOC coordination of, and consultation on, agency rulemakings on data collection, and seeks to minimize duplication of data gathering operations. The committee supports a coordinated approach to information sharing and provides direction to, and requests data from, the Office of Financial Research (OFR). Additionally, the committee works with OFR on data standardization efforts. Treasury chairs this committee.

Appendix III: Comments from the Department of the Treasury

UNDER SECRETARY

DEPARTMENT OF THE TREASURY
WASHINGTON, D.C.

September 5, 2012

Ms. A. Nicole Clowers
Director, Financial Markets and Community Investment
Government Accountability Office
441 G St., NW
Washington, D.C. 20548

Dear Ms. Clowers:

I am writing on behalf of Secretary Geithner, who serves as the Chairperson of the Financial Stability Oversight Council (Council) and who has authority over the Office of Financial Research (OFR). As you know, Congress recently created both organizations pursuant to the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Act). We appreciate the opportunity to review the Government Accountability Office's (GAO) draft report GAO-12-886 (the Draft Report) regarding the stand-up and operations of the Council and the OFR.

We strongly support GAO's important oversight function, and we appreciate the constructive input and feedback from your team during the course of this audit. Although we have some concerns with the Draft Report's findings and recommendations, we broadly agree that both the Council and OFR have taken important steps to strengthen transparency and accountability, and we are committed to continuing those efforts in the future.

The Council and the OFR

Since the passage of the Act, the Council has moved quickly to fulfill its statutory mission and to promote greater collaboration and coordination among its members. The Draft Report describes many of these actions. For example, in the past year, the Council issued a final rule and guidance relating to the designation of nonbank financial companies for Federal Reserve supervision and enhanced prudential standards and is currently analyzing firms pursuant to the rule and guidance. It also designated eight systemically important financial market utilities (FMUs) that will be subject to enhanced risk management standards. The Council continued to monitor potential risks to U.S. financial stability and submitted three reports to Congress. Moreover, the meetings of the entire Council—as well as its interagency committees—served as opportunities for discussion, collaboration, and coordination among the member agencies implementing the Act.

Similarly, the OFR has made progress in building a strong organization and has begun delivering on its core research and data-related mandates. In July, the OFR issued its first annual report to Congress, which includes extensive information about risks to financial stability, the OFR's activities, and its research and data-related agenda, including the types and sources of data it will need to fulfill its mission. The OFR has begun to provide analytic and data-related support to the

Council, has launched both a working paper and a seminar series for research on financial stability and risk management, and has played a leadership role in achieving global acceptance of a Legal Entity Identifier (LEI) to help regulators and market participants identify and mitigate threats to the financial system.

Transparency and Accountability

Both the Council and the OFR are firmly committed to operating in an open and transparent manner. As discussed in the Draft Report, the Council has conducted several voluntary rulemaking processes, which have included notice and public comment periods. It has adopted a transparency policy, which provides that Council meetings will be open to the public whenever possible. Separately, Treasury and other Council members have adopted policies that provide disclosure of meetings with the public regarding the implementation of the Act. Treasury has disclosed on its public website hundreds of meetings, many of which involve the Council or issues relevant to it. And Council members communicate frequently with Members of Congress and their staffs, including through public testimony, briefings, and meetings.

The OFR and its staff also have worked to promote transparency and accountability. They have testified publicly before Congress, responded to numerous requests for information from various oversight bodies, and posted key operational materials and outputs on the OFR's website. To further strengthen accountability, the OFR is working to establish and enhance policies, procedures, and internal controls related to budget, human capital, planning, data security, and other operational matters. And the OFR soon will announce the membership of its Financial Research Advisory Committee, which will strengthen further the organization's engagement with industry experts and academics.

The Draft Report acknowledges the efforts of both organizations. Nonetheless, it is important to emphasize the broader context: both the Council and the OFR are relatively new, start-up organizations that have been working hard over the past two years to hire staff, establish internal procedures, communicate with the public, and fulfill their statutory responsibilities. Although both organizations have accomplished much, we recognize that there is still much to do.

GAO's Recommendations

We will carefully consider the final report's findings and recommendations. Since most are addressed to the Council, Secretary Geithner, in his capacity as Chairperson, will share the final report's recommendations with the Council members for their review and consideration.

We would like to highlight Treasury's initial reaction to several of your recommendations. First, the Draft Report proposes that the Council should clarify the responsibilities of the Council and the OFR for monitoring threats to financial stability—including the systematic sharing of key financial risk indicators—and should establish collaboration and coordination policies. To the extent that GAO is suggesting any existing confusion or overlap of responsibilities, we disagree. The Draft Report does not cite any examples of overlap between the work of the Council and the OFR, and we believe both organizations are working together to pursue their distinct—but complementary—statutory missions. Moreover, the OFR has developed a collection of metrics

and indicators related to financial stability, referred to as the “Financial Stability Monitor.” We expect that the Financial Stability Monitor will be shared with Council members and member agencies and will provide a systematic approach to sharing key financial risk indicators.

Second, the Draft Report recommends that the Council should conduct an analysis of the broad economic impact of designating FMUs and nonbank financial companies. The Council will assess, on a periodic basis, whether designated FMUs or nonbank financial companies should continue to be subject to enhanced prudential standards. In conducting such reviews, we expect the Council will consider the effects on the financial system resulting from designation.

The Draft Report addresses other recommendations to the OFR. We agree that the OFR should implement a robust strategic planning and performance management system as the office grows. In fact, we believe the OFR is implementing such a system. The OFR published its first strategic plan in March, which describes the office’s long-term strategic goals and objectives, as well as medium-term and FY 2012-specific implementation priorities. The strategic plan also includes appendices about the OFR’s organization and workforce plan, governance, transparency, and oversight. As anticipated in this plan, the OFR has now developed performance measures and linked its planning, project management, human capital, and budget activities to its strategic goals and objectives—work that will be included as part of the Administration’s FY 2014 budget submission to Congress.

The Draft Report also includes recommendations regarding the OFR’s communications strategy that we believe are consistent with the office’s ongoing efforts. The OFR is assembling a dedicated staff to support effective communications with the public, as well as outreach to industry and other key partners. In addition, the OFR recently modified its website to enable users to receive updates when new content is added, and it is working to support a more user-friendly design and page layout. Separately, the Council’s website is being redesigned to improve overall usability and navigation.

Thank you again for the opportunity to review and comment on the Draft Report. We value GAO’s input and recommendations, and we look forward to working with you in the future.

Sincerely,

Mary J. Miller

Appendix IV: GAO Contact and Staff Acknowledgments

GAO Contact

A. Nicole Clowers, (202) 512-8678 or clowersa@gao.gov

Staff Acknowledgments

In addition to the contact named above, Kay Kuhlman (Assistant Director), Holland Avery, Nancy Barry, Emily Chalmers, Rudy Chatlos, Rachel DeMarcus, Christopher Forys, Michael Hoffman, Marc Molino, Susan Sawtelle, Rachel Siegel, and Henry Wray made significant contributions to this report. Other assistance was provided by Janet Eackloff and David Martin.

GAO's Mission

The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.

Obtaining Copies of GAO Reports and Testimony

The fastest and easiest way to obtain copies of GAO documents at no cost is through GAO's website (<http://www.gao.gov>). Each weekday afternoon, GAO posts on its website newly released reports, testimony, and correspondence. To have GAO e-mail you a list of newly posted products, go to <http://www.gao.gov> and select "E-mail Updates."

Order by Phone

The price of each GAO publication reflects GAO's actual cost of production and distribution and depends on the number of pages in the publication and whether the publication is printed in color or black and white. Pricing and ordering information is posted on GAO's website, <http://www.gao.gov/ordering.htm>.

Place orders by calling (202) 512-6000, toll free (866) 801-7077, or TDD (202) 512-2537.

Orders may be paid for using American Express, Discover Card, MasterCard, Visa, check, or money order. Call for additional information.
